Class prototype · fictional data only

AI-Assisted Patient Intake User Guide

A step-by-step walkthrough of the Intake Helper prototype for people who have never seen it before. No medical or technical background needed.

Open the prototype at **https://intake-helper.onrender.com**

University class prototype (CS497/HLTH480). Not affiliated with, or endorsed by, WRHN, Oracle Health or MyConnectedCare. All names, patients and data in this guide are made up.

What's inside

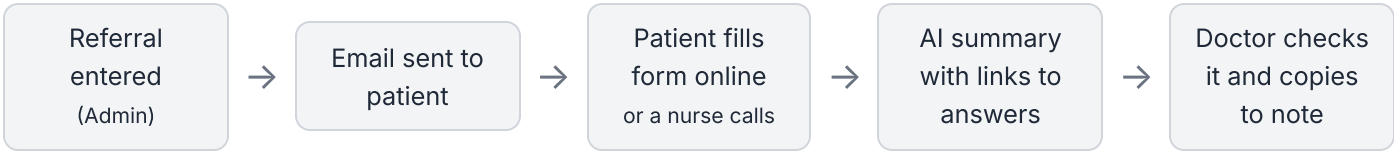

1. What is Intake Helper?
2. Who uses it: the four "places" in the prototype
3. Before you start (opening the site, logins, resetting)
4. Scenario 1: A patient fills in the form online
5. Scenario 2: The oncologist reviews the form and starts a note
6. Scenario 3: A patient asks for a nurse to call instead
7. Scenario 4: A co-op student does the intake, a nurse checks it
8. Scenario 5: Front desk staff add a new patient
9. Tips, troubleshooting and glossary

1. What is Intake Helper?

When someone is referred to a cancer centre for the first time, the care team needs a lot of background information before the first visit: why they were referred, symptoms, allergies, medications, medical and family history, lifestyle and who to contact in an emergency. This is called the **new patient intake**.

Today this is often done on paper or with long phone calls. Intake Helper is a prototype that shows a better way:

- **Patients** get an email a week before their first appointment and fill in a friendly, step-by-step form online, in their own time. They can have questions read out loud, speak their answers, or ask for a nurse to call them instead.
- **Cancer centre staff** (nurses, co-op students and front desk admins) use a staff portal to call patients who need help, fill in the form for them, and check each other's work.
- **The oncologist** (cancer doctor) gets the answers in the patient's electronic health record with a short **AI-written summary**. Every sentence in the summary has small numbered links that point back to the patient's exact answers, so the doctor can check it quickly. Missing answers are flagged, and the summary can be copied into the doctor's consultation note with one click.

This is a prototype

It is a clickable demo built for a university class. Everything is fake: the email inbox, the patient portal and the health record are all simulated inside one website. Never type real personal or health information into it.

2. Who uses it: the four "places" in the prototype

The website pretends to be several different systems so you can see the whole journey. Each one opens in its own browser tab.

Demo hub

The home page. It has links to every system and a hidden **Reset demo data** button (behind the gear icon) that puts everything back to the start.

Patient: Mail + MyConnectedCare

A pretend email inbox where the patient receives the intake email, and **MyConnectedCare**, the patient portal where they fill in the intake form.

Staff: Intake Assistant

The cancer centre's staff portal. **Admins** enter new referrals. **Nurses** answer "please call me" requests and review co-op work. **Co-op students** complete intakes by phone.

Doctor: EMR

A simplified electronic medical record (EMR). The **oncologist** reads the intake document and AI summary, marks it as checked, and writes a consultation note.

The people in the demo

Who you play	Name in the demo	Where they work
Patient	Jane Doe (and other made-up patients)	Mail, MyConnectedCare
Admin (front desk)	Alex Morgan	Intake Assistant
Nurse	Priya Patel, RN	Intake Assistant
Co-op student	Jordan Lee	Intake Assistant
Oncologist (doctor)	Dr. Maria Santos	EMR

3. Before you start

Opening the site

Go to **https://intake-helper.onrender.com** in any web browser (Chrome, Safari, Edge, Brave or Firefox) on a laptop or desktop.

> **The first visit can take about a minute**
>
> The prototype runs on a free hosting plan that goes to sleep after 15 minutes without visitors. If the page seems stuck loading, just wait up to a minute; it is waking up. When it wakes up, all the demo data starts fresh.

Logging in

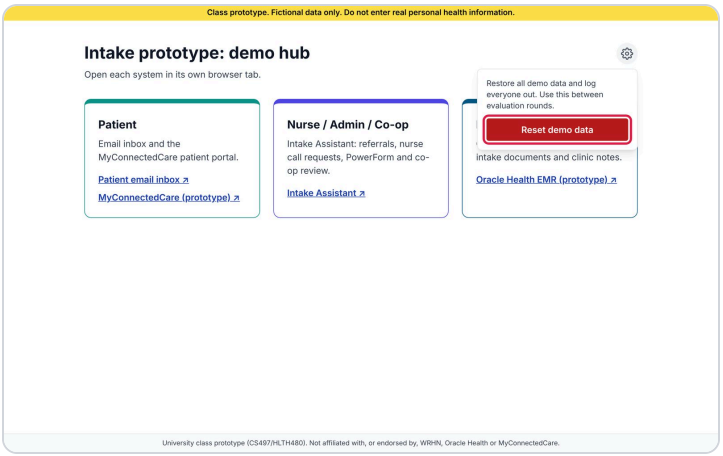

To keep the demo quick, most places do not ask for a password:

Place	What you see
Mail (patient inbox)	Asks for an email and password. Use `jane.doe@example.com` and the password `password`.
MyConnectedCare (patient portal)	No login needed when you arrive from the email's **Open MyConnectedCare** button.
Intake Assistant (staff)	Three buttons: **Continue as Admin**, **Continue as Nurse**, **Continue as Co-op student**. Use **Switch role** (top right) to change.
EMR (doctor)	Opens straight away as Dr. Maria Santos.

> **All demo passwords are `password`**
>
> Other patient emails you can use in Mail: `robert.chen@example.com`, plus any new patient an admin creates in Scenario 5.

Starting over (reset)

If you want to run a scenario again from the beginning, go back to the demo hub, click the **gear icon** in the top right, then click **Reset demo data**. Close or reload your other tabs afterwards.

Gear icon → Reset demo data. This restores all demo patients and logs everyone out.

How to read the screenshots

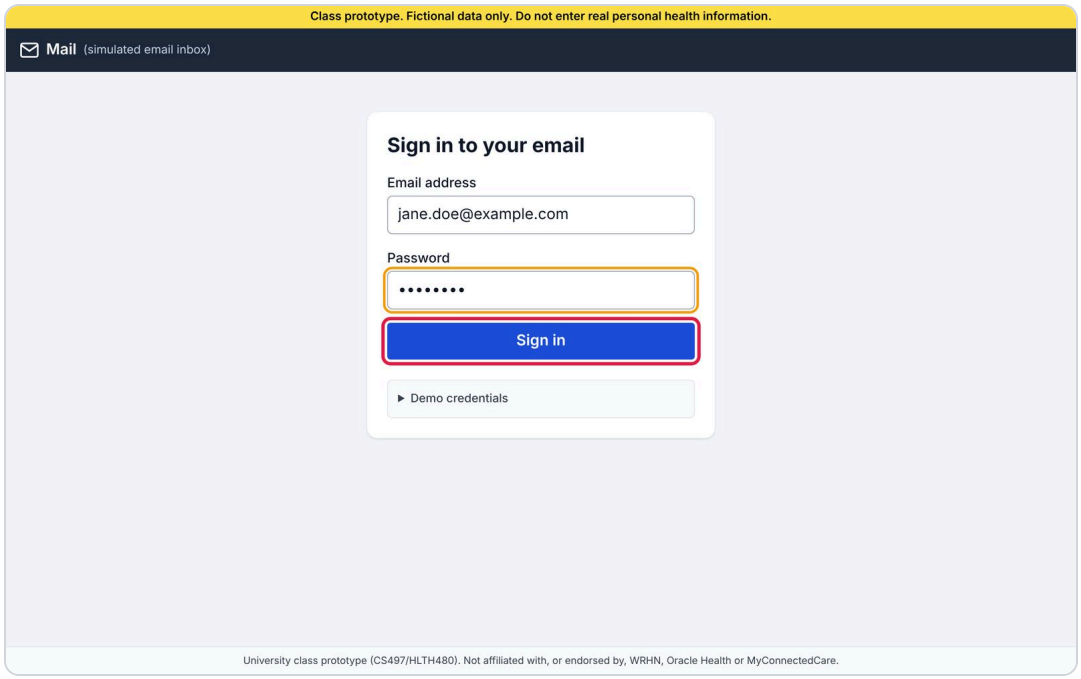

A **red outline** shows what to click or look at in that step.

You are: the patient

Scenario 1: A patient fills in the form online

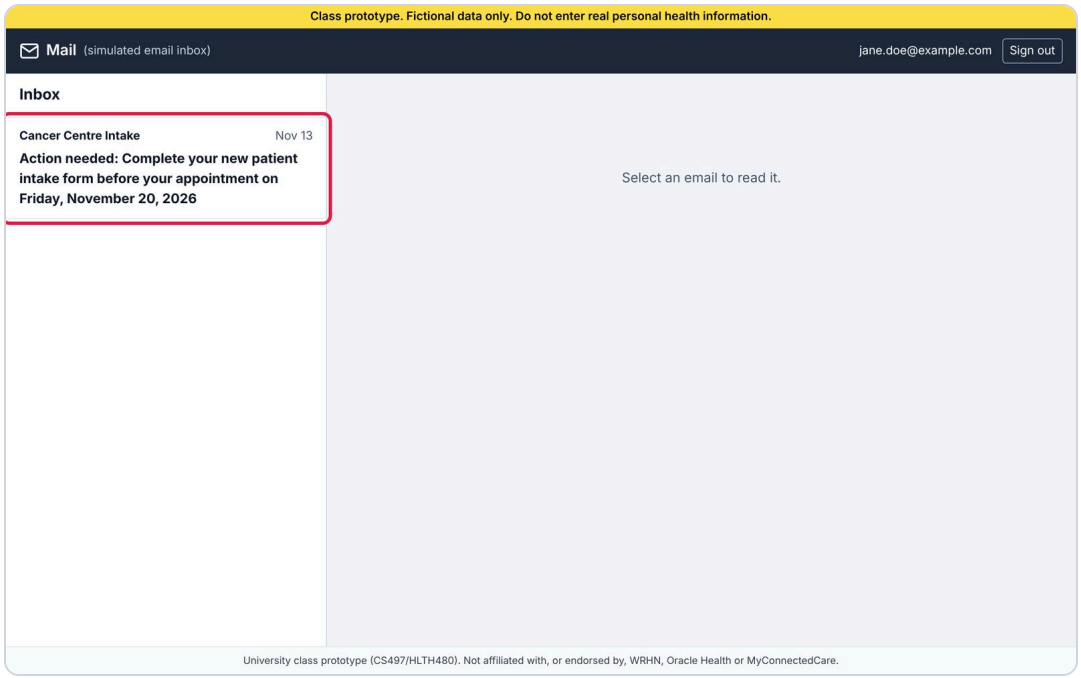

You are **Jane Doe**. You were just referred to the Cancer Centre and your first appointment is in about a week. You received an email asking you to fill in an intake form. Takes about 10 minutes.

1. From the demo hub, click **Patient email inbox**. Sign in with `jane.doe@example.com` and password `password`, then click **Sign in**.

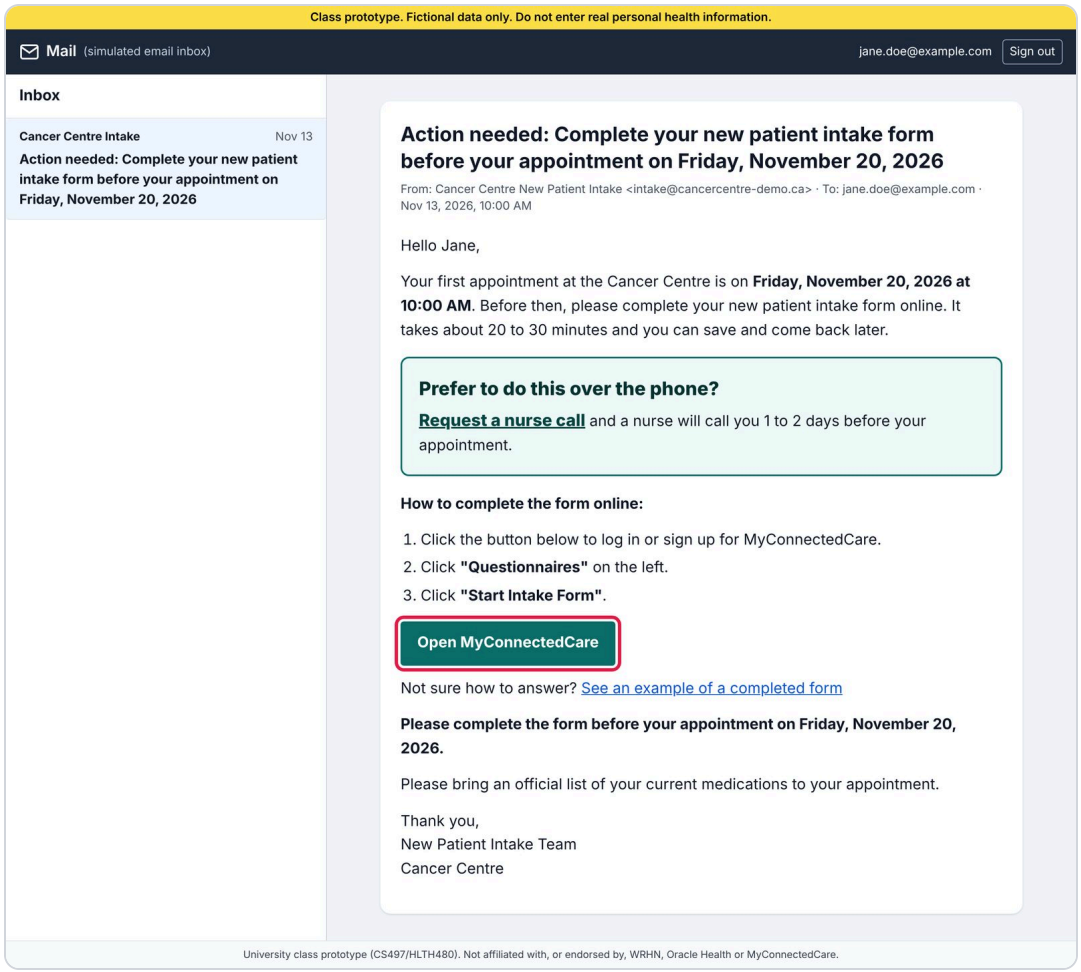

The pretend email inbox.

2 Click the email titled **"Action needed: Complete your new patient intake form..."**.

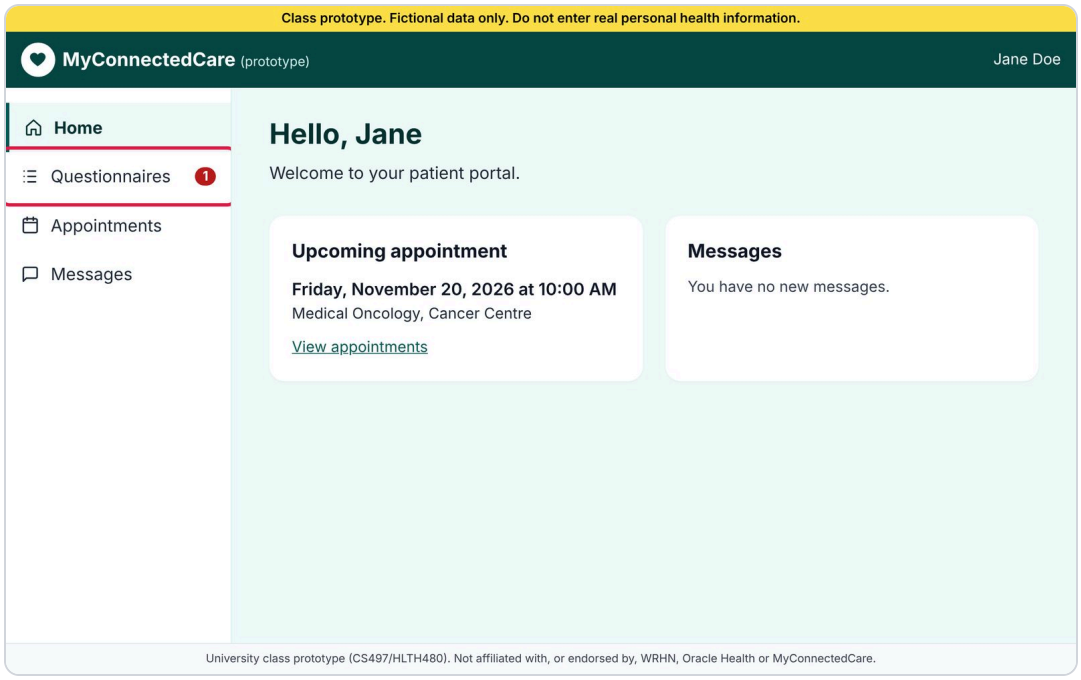

3 Read the email. It explains what to do and offers a phone option (used in Scenario 3). Click the green **Open MyConnectedCare** button. The patient portal opens in a new tab and you are signed in automatically.

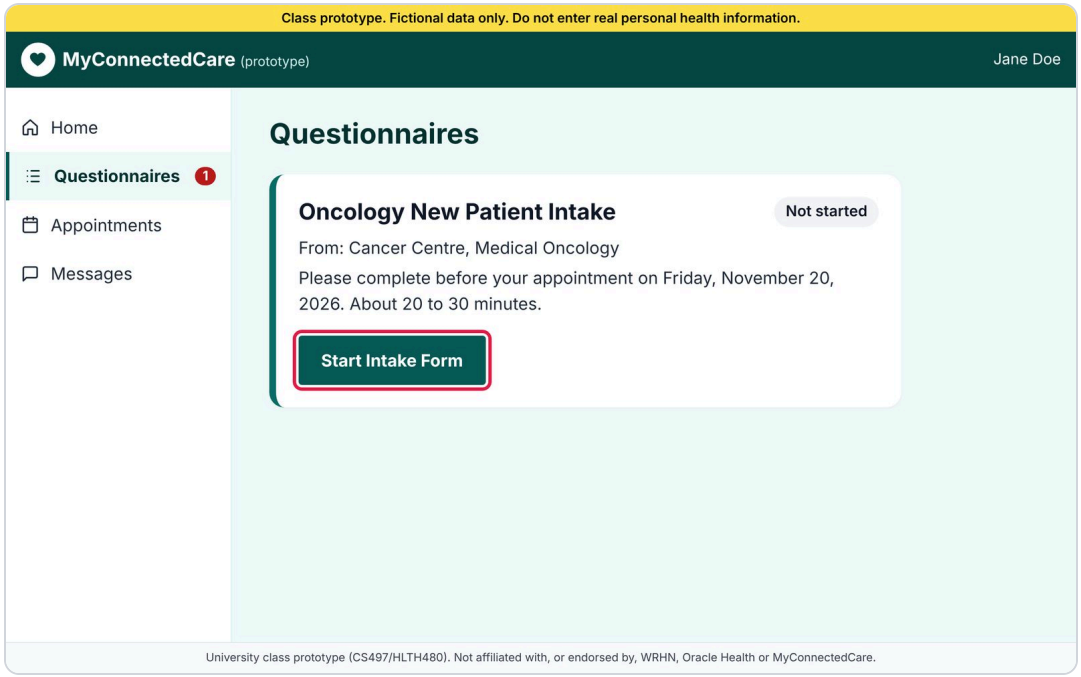

The intake email. "See an example of a completed form" shows what good answers look like.

4 You are now on the MyConnectedCare home page. Click **Questionnaires** on the left (the red "1" means one form is waiting).

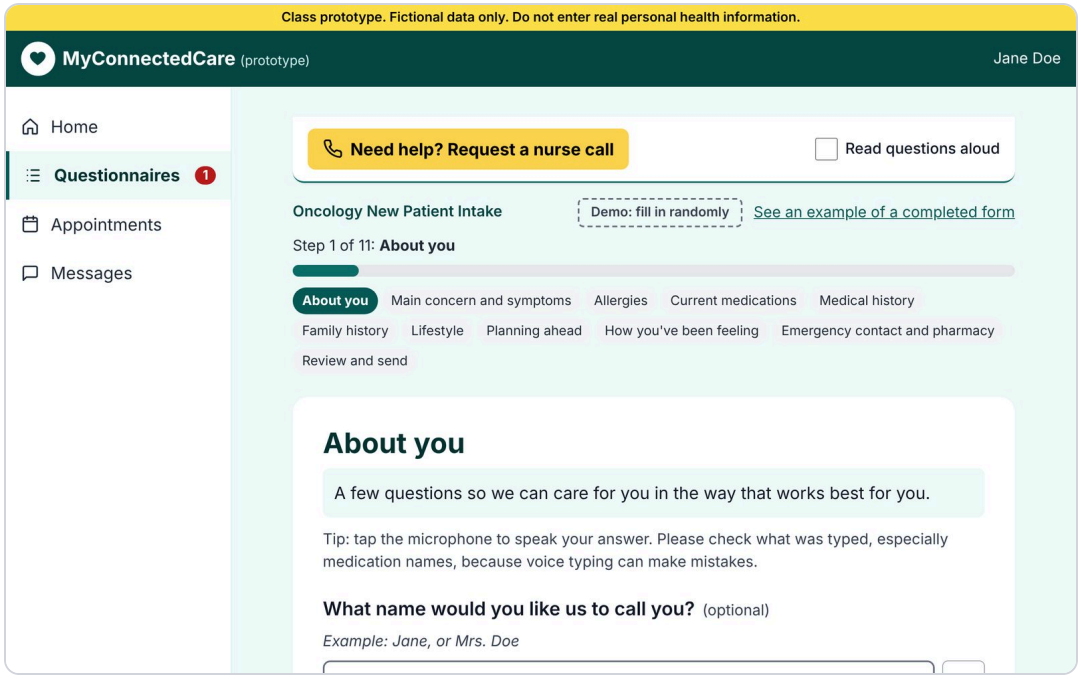

5 Click **Start Intake Form**.

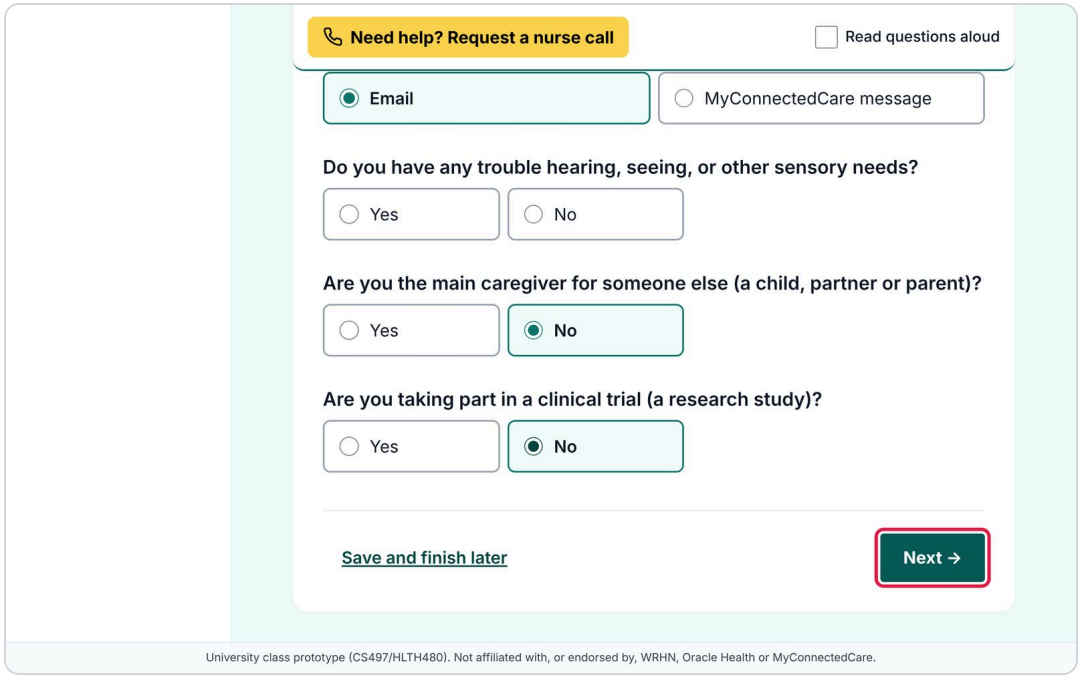

6 The form is split into short steps, listed across the top (About you, Main concern and symptoms, Allergies, and so on). Each question has an example answer in grey italics to help you.

Answer the questions on the first step, then click **Next →** at the bottom.

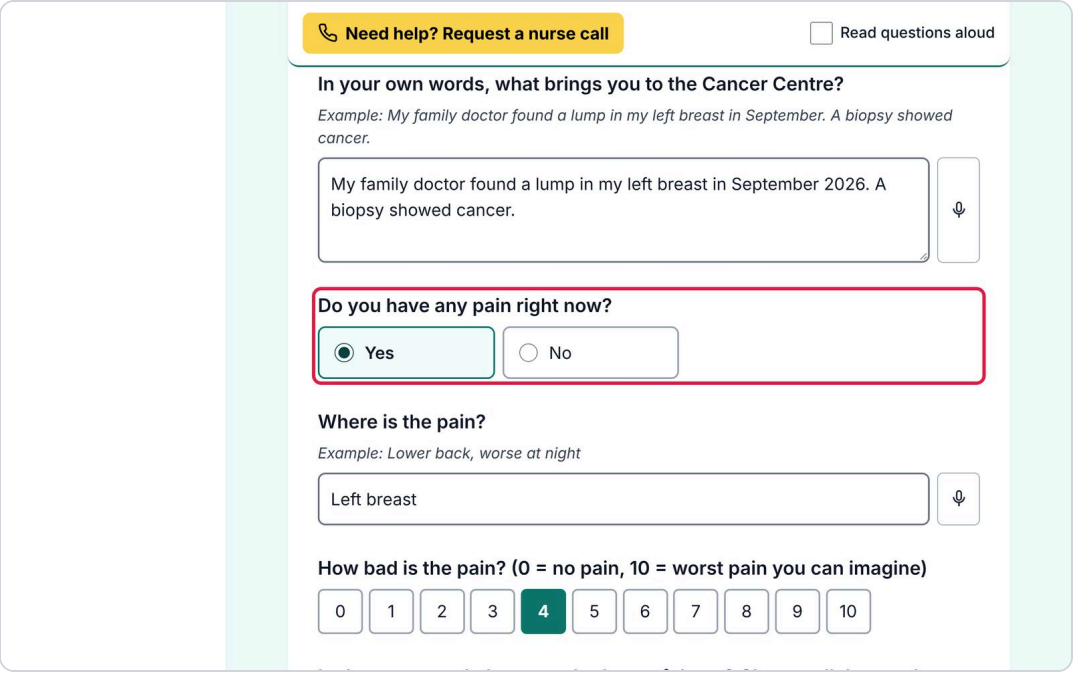

Step 1, "About you". Your answers save automatically as you go.

Bottom of step 1. Some questions only appear when they apply (for example, the pregnancy question appears only after choosing "Female").

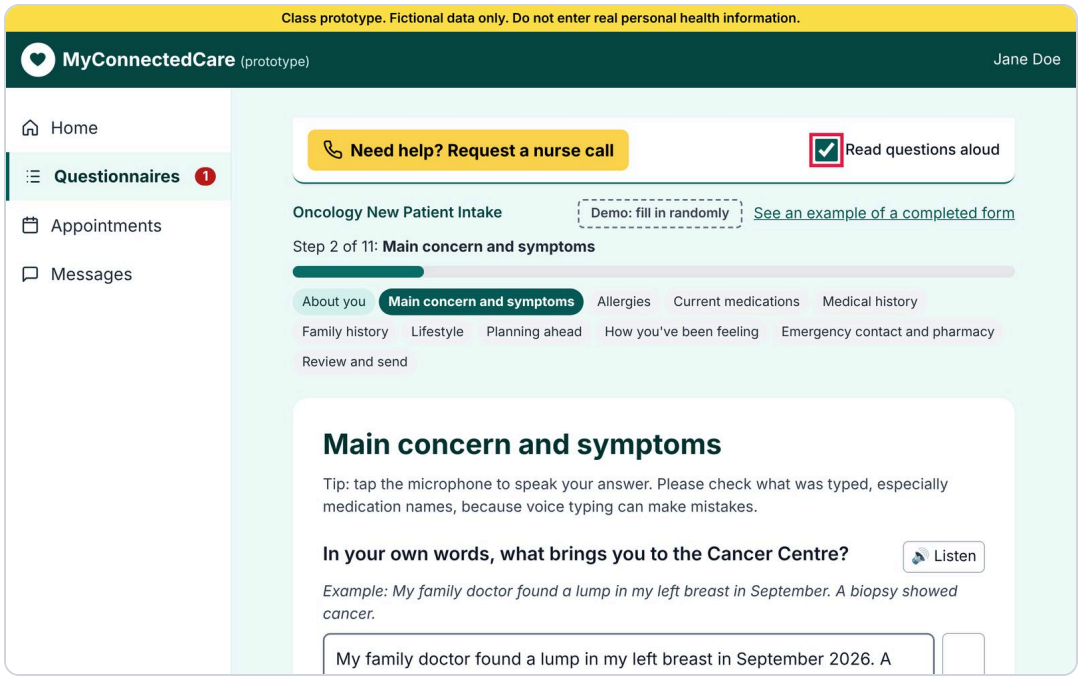

7 Keep going through the steps. Answer in your own words, click Yes/No buttons, pick a pain score from 0 to 10, and tick any symptoms that apply.

"Main concern and symptoms". Answering "Yes" to pain shows follow-up questions about where and how bad.

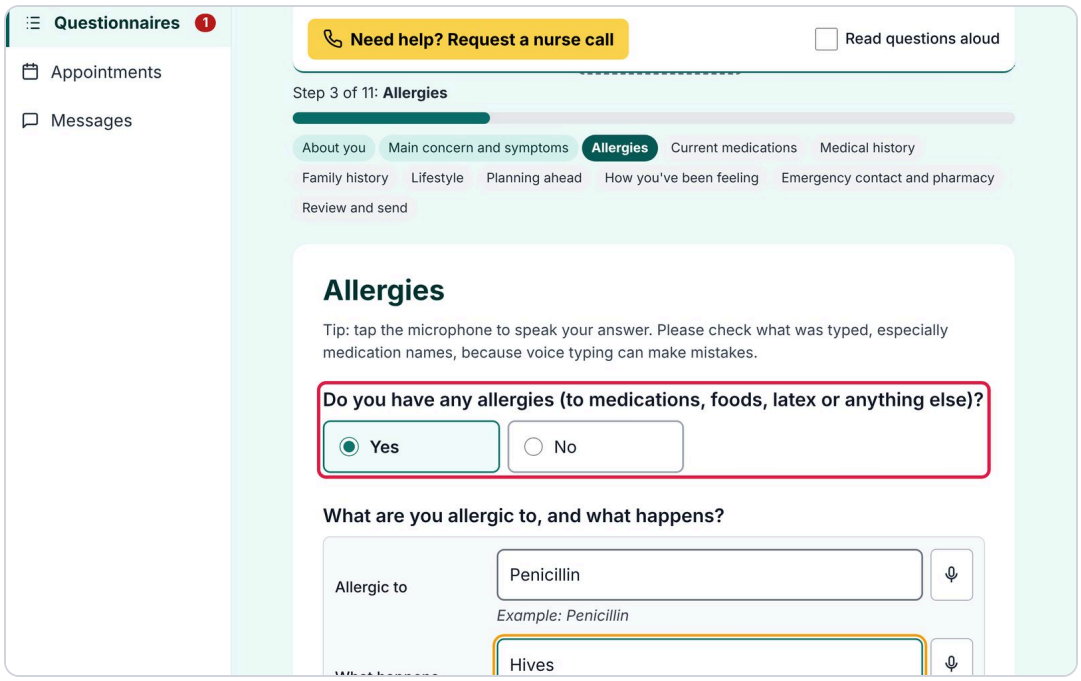

Helpful extras on every step

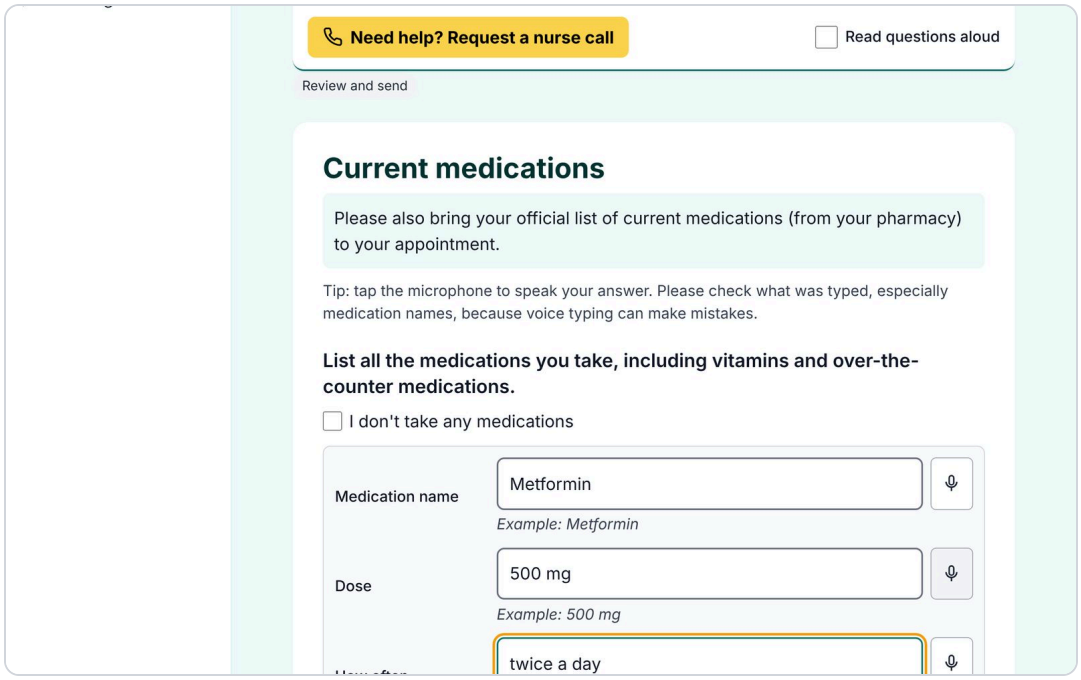

- **Read questions aloud** (top right): the computer reads each question out loud.
- **Microphone button** next to a text box: speak your answer instead of typing.
- **Need help? Request a nurse call** (yellow button): ask a nurse to phone you and do the form with you.
- **Save and finish later**: stop now and come back another time.
- **Demo: fill in randomly**: a shortcut for demos only. It fills every question with made-up answers and jumps to the end.

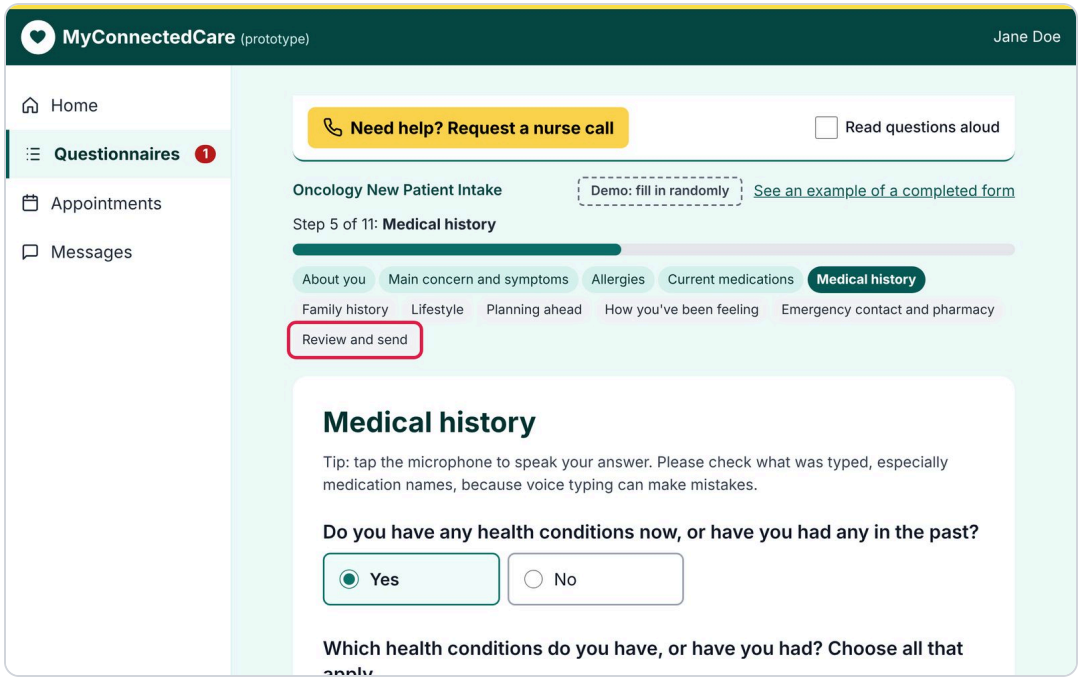

The "Read questions aloud" switch.

8 On the **Allergies** and **Current medications** steps, list each item. Extra boxes appear so you can add the reaction (for allergies) or the dose and how often you take it (for medications).

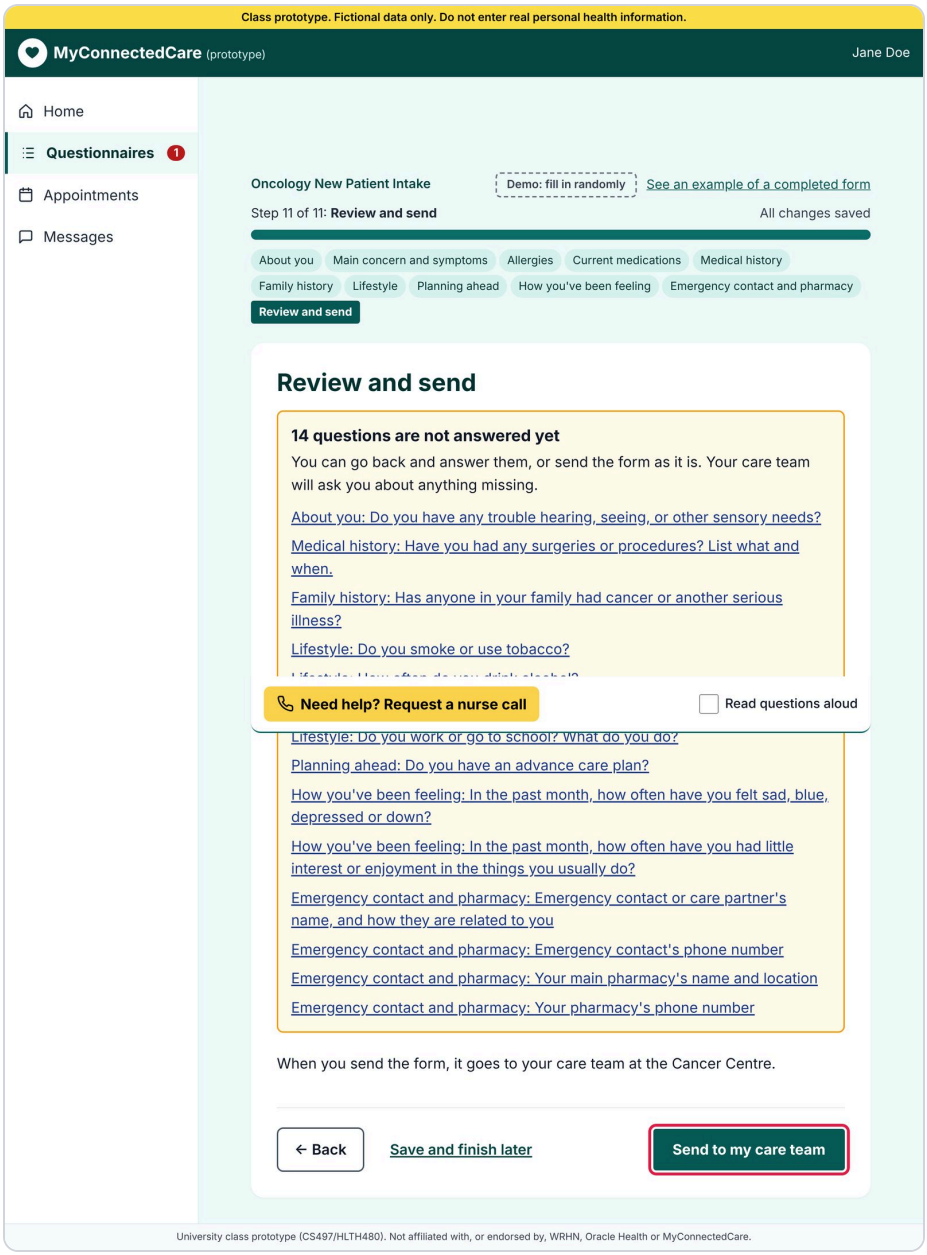

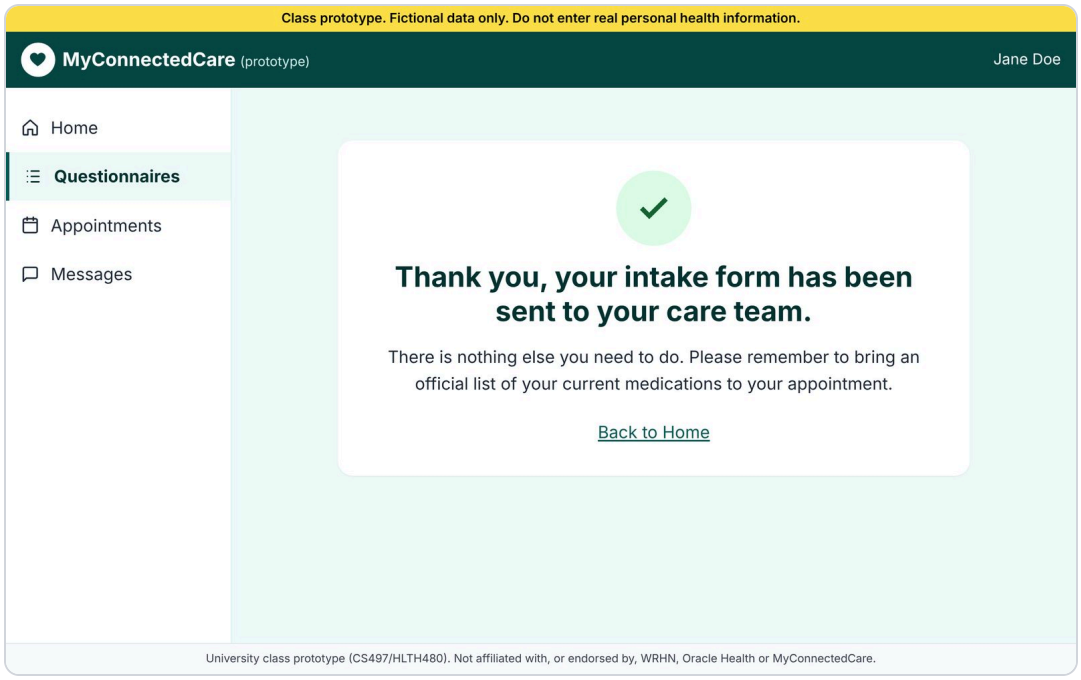

9 You don't have to answer everything. When you are ready, click **Review and send** in the list of steps at the top (or keep clicking Next until the last step).

10 The review page lists any questions you skipped. You can go back and answer them, or send the form as it is (your care team will ask about anything missing). Click **Send to my care team**.

11 You see a thank-you message. That's it for the patient. Behind the scenes, the answers are sent to the doctor's EMR and an AI summary is prepared.

What just happened?

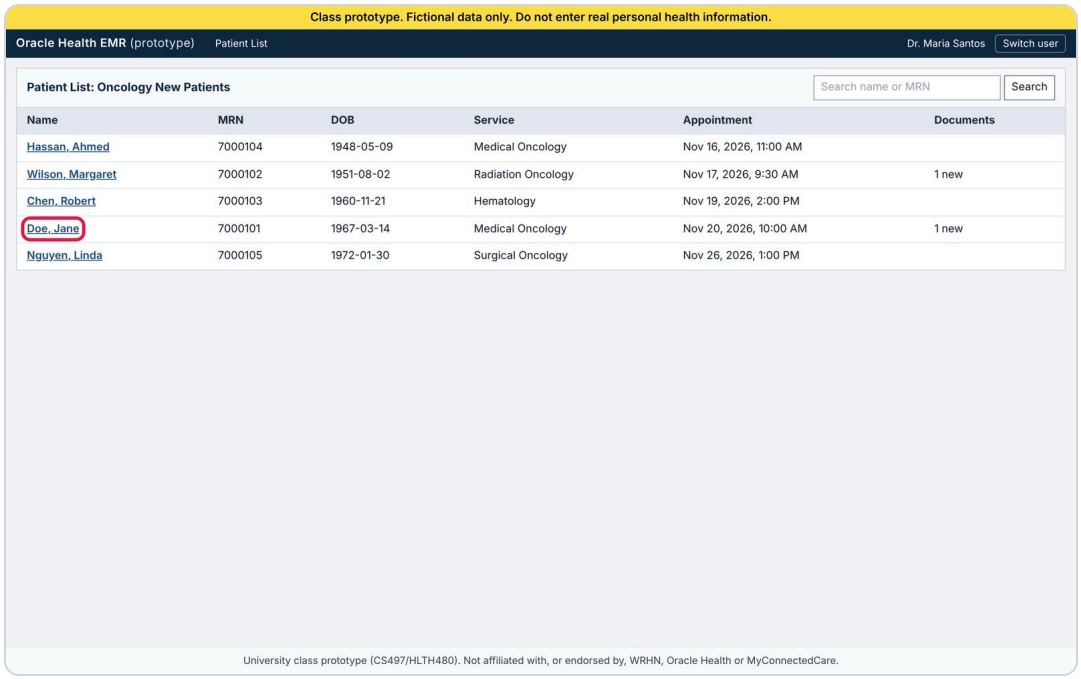

The patient finished the intake from home, in their own words, without a phone call. Next, see what the doctor receives in Scenario 2.

You are: the oncologist

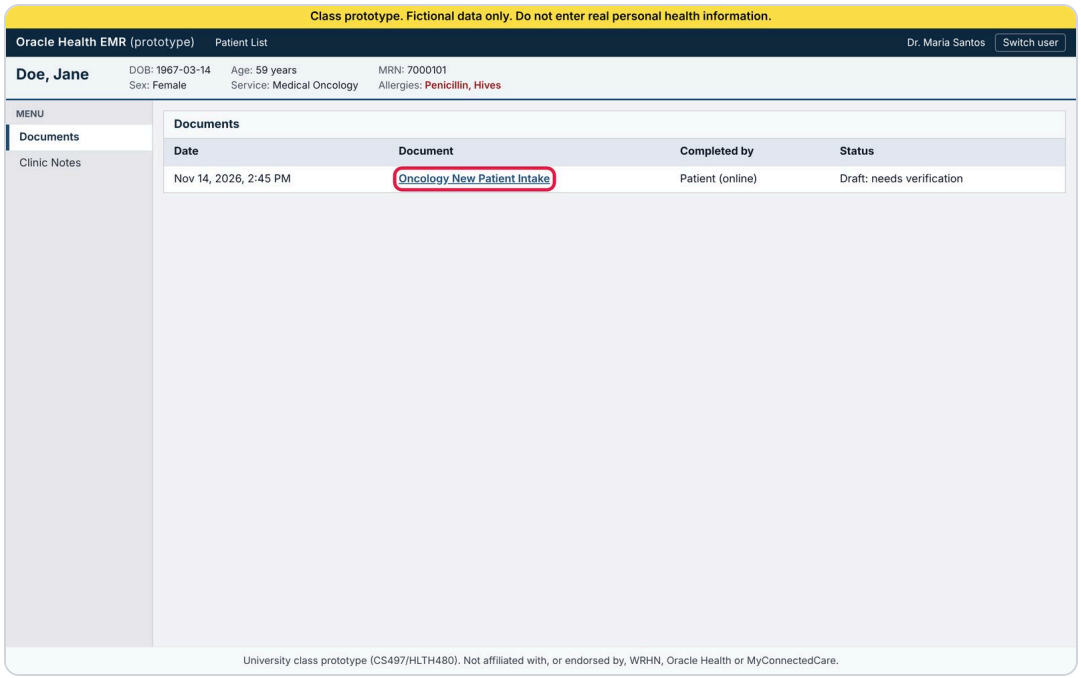

Scenario 2: The oncologist reviews the form and starts a note

You are **Dr. Maria Santos**. You are about to see Jane Doe for the first time. You want to check her intake information and start your consultation note. Do Scenario 1 first so Jane has a form to review. Takes about 5 minutes.

1 From the demo hub, click **Oracle Health EMR (prototype)**. You see the list of new patients. "1 new" in the Documents column means a new intake has arrived. Click **Doe, Jane**.

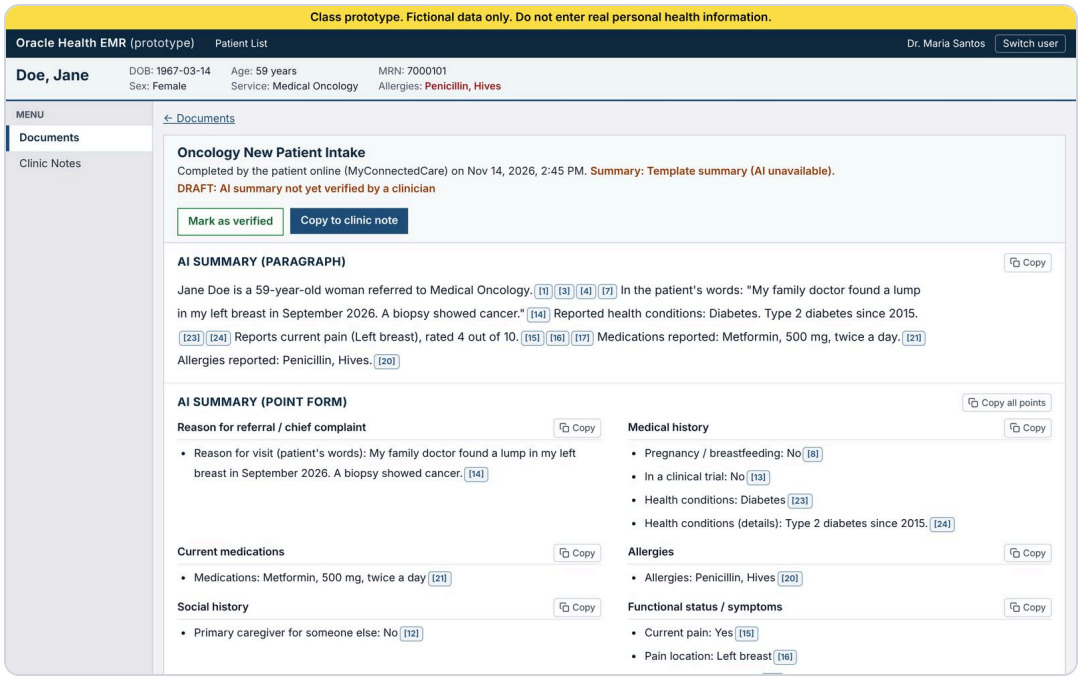

2 Click **Oncology New Patient Intake** to open the document.

3 The top of the document says who filled it in and when. It is marked **DRAFT** until a clinician checks it. Below that you see:

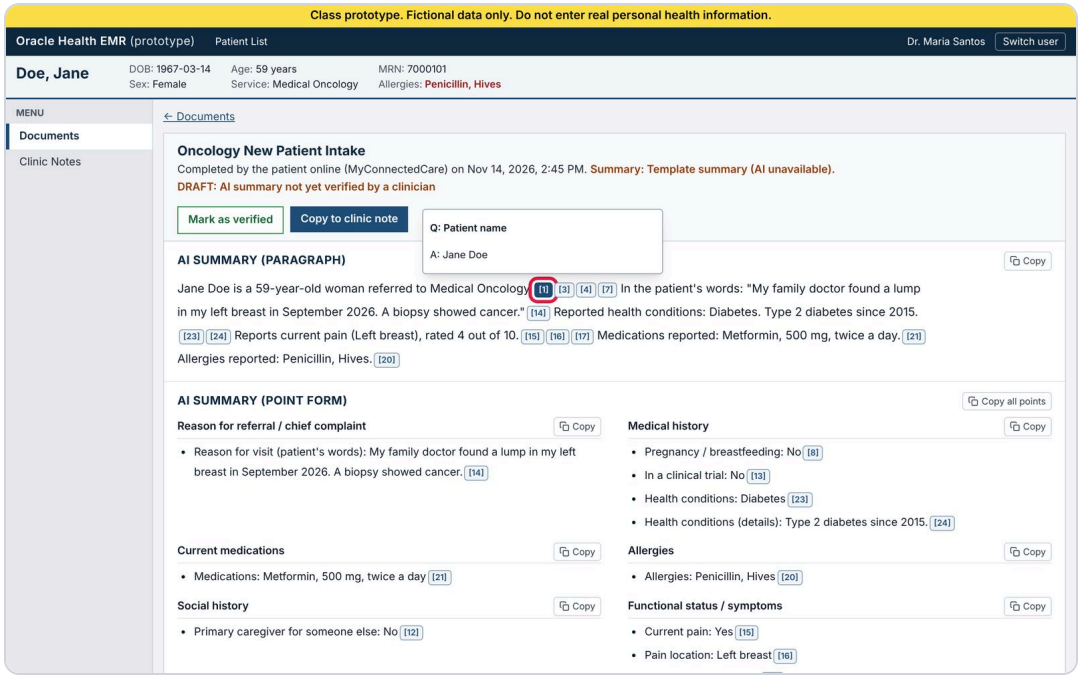

- **AI Summary (paragraph)**: a short story of the patient in a few sentences.
- **AI Summary (point form)**: the same information grouped under headings like Medications and Allergies, each with a **Copy** button.
- **Flagged / missing items** and the full **Raw Form Data** (every question and answer) further down.

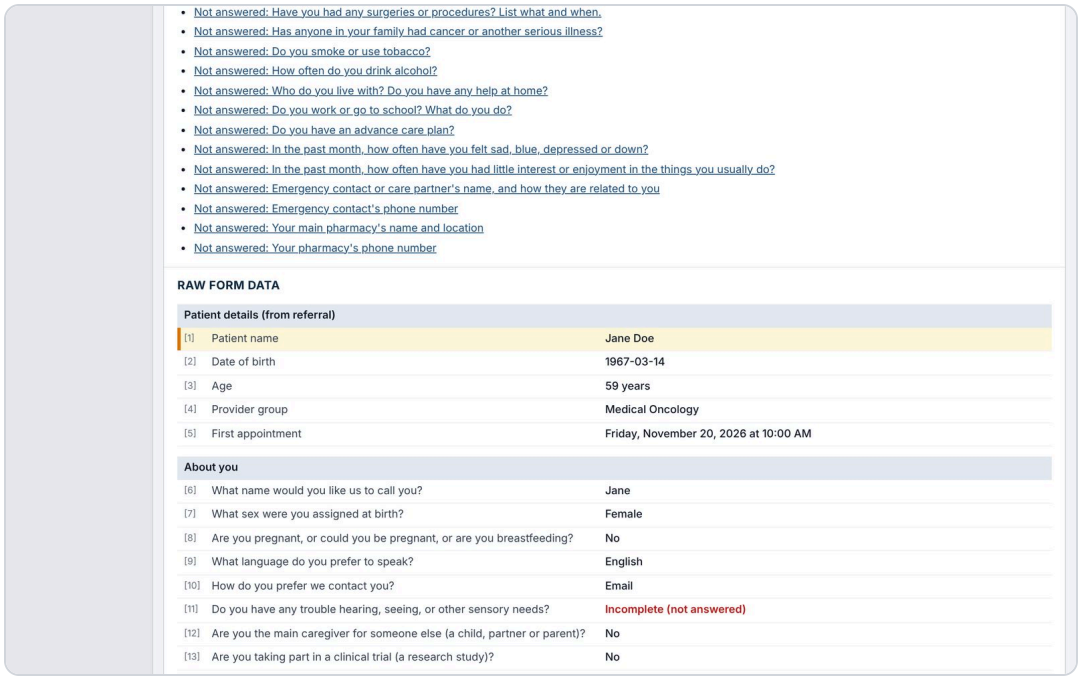

About the AI summary

The summary is written by an AI model from the patient's answers only. If the AI service is not available, the prototype builds a simpler summary from the answers and labels it "Template summary (AI unavailable)", as in these screenshots. Either way, the doctor must check it before relying on it.

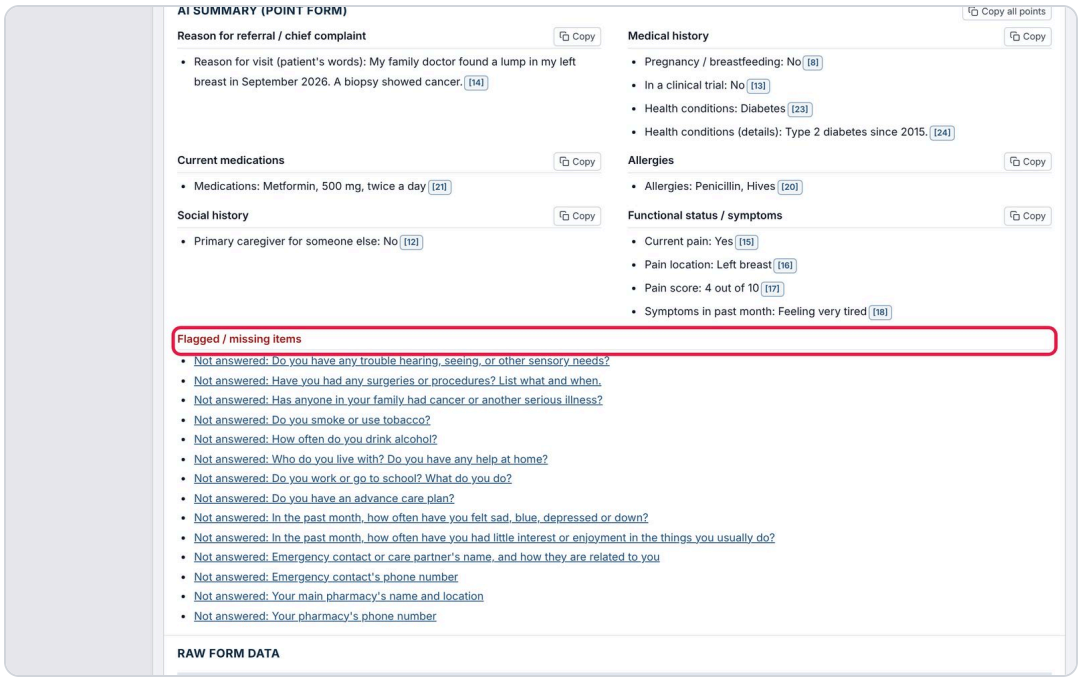

4 Notice the small numbered boxes like **[1]** or **[14]**. These are **citations**: each one points to the exact question and answer the sentence came from. **Hover** over one to see the question and answer in a pop-up.

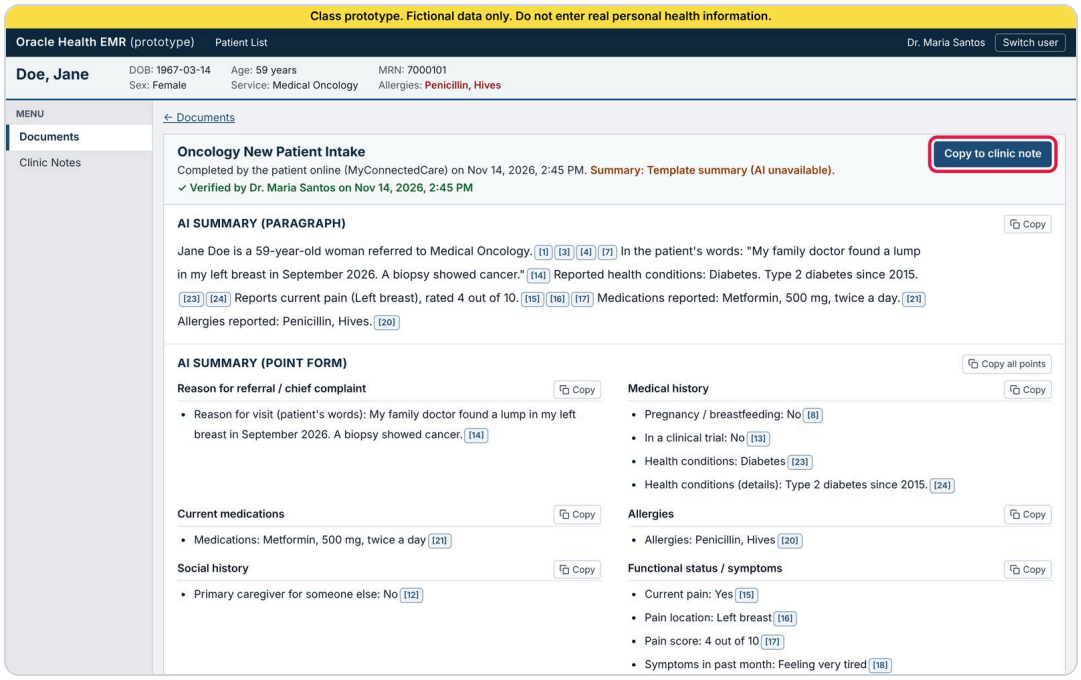

5 **Click** a citation to jump down to that answer in the Raw Form Data. It is highlighted so you can check the summary against what the patient actually wrote.

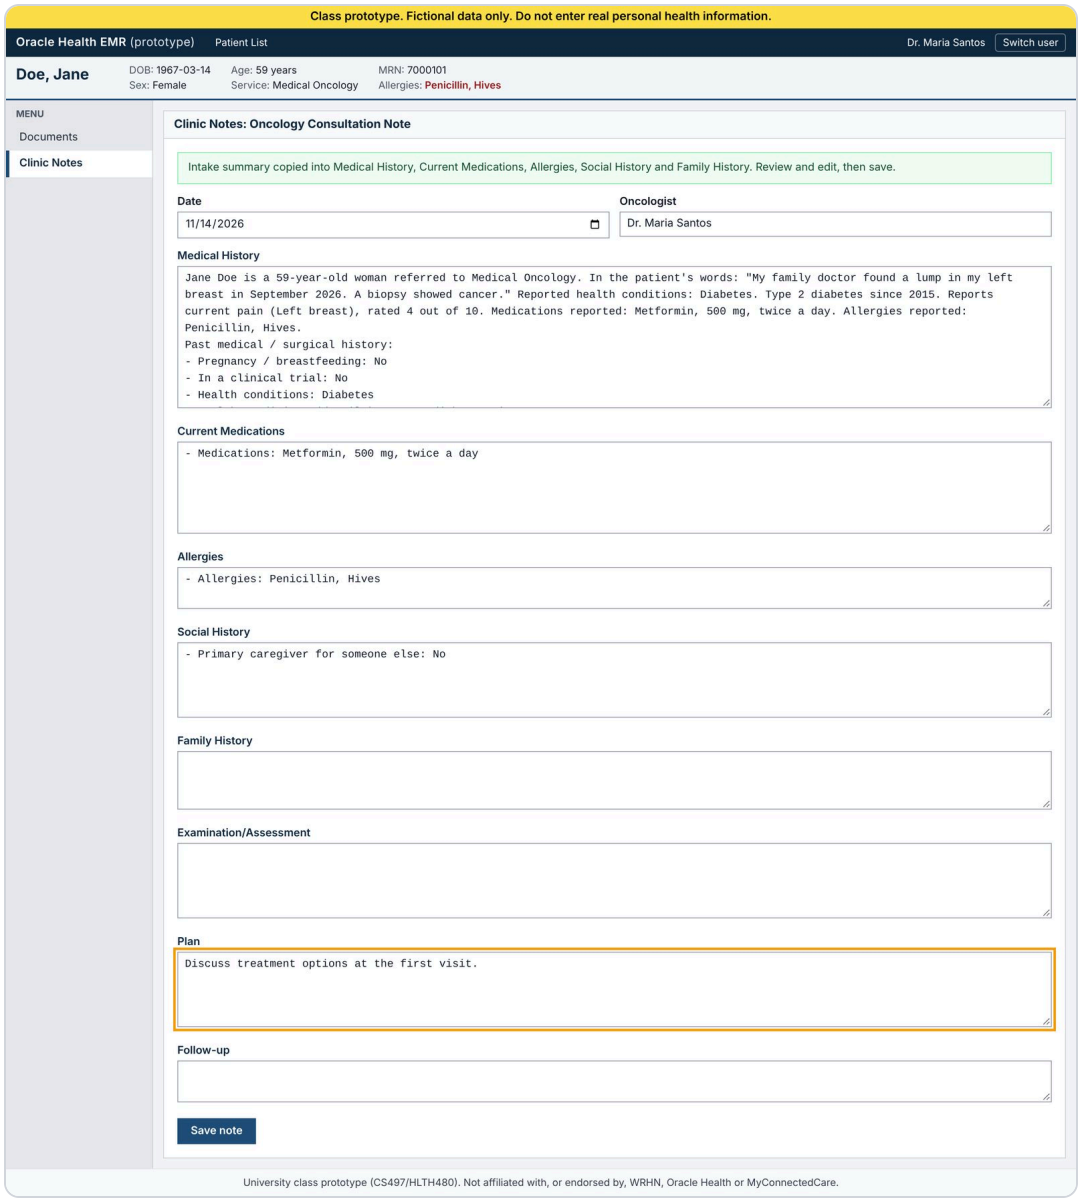

6 Scroll to **Flagged / missing items**. This lists every question the patient skipped, so you know what to ask in the appointment. Click an item to jump to it.

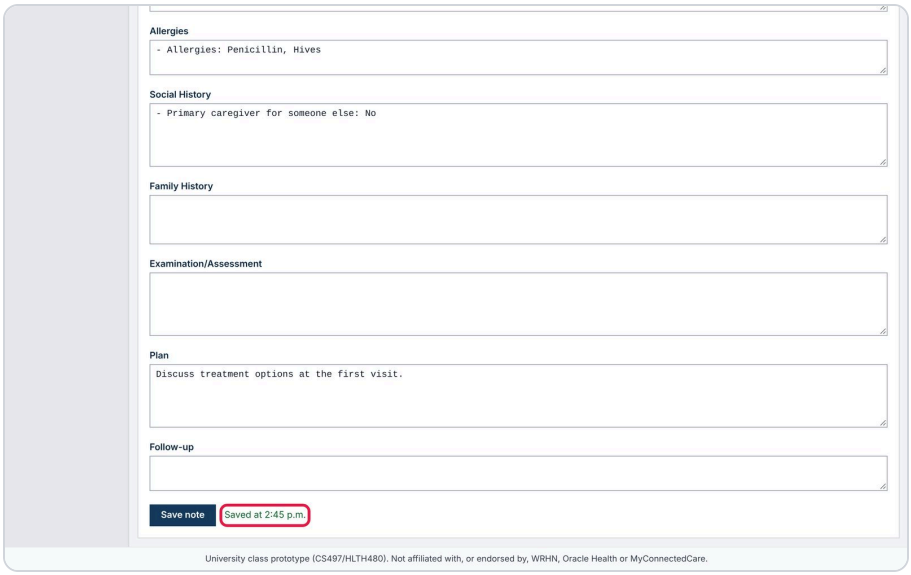

7 Once you are happy the summary is accurate, scroll back up and click **Mark as verified**. The DRAFT label is replaced with your name and the time.

8 Click **Copy to clinic note**. The Clinic Notes page opens with Medical History, Current Medications, Allergies, Social History and Family History already filled in from the intake. Edit anything you like, add your Examination/Assessment and Plan, then click **Save note**.

The consultation note, pre-filled from the intake. Citation numbers are removed automatically.

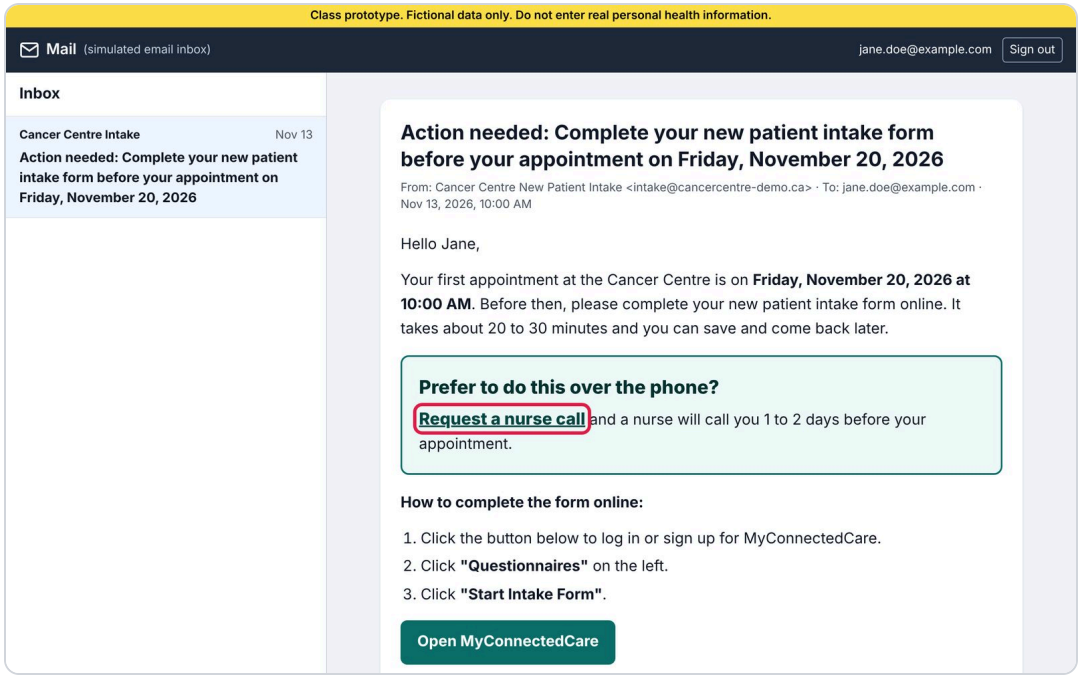

"Saved at ..." confirms the note was saved.

Part A: the patient

Scenario 3: A patient asks for a nurse to call instead

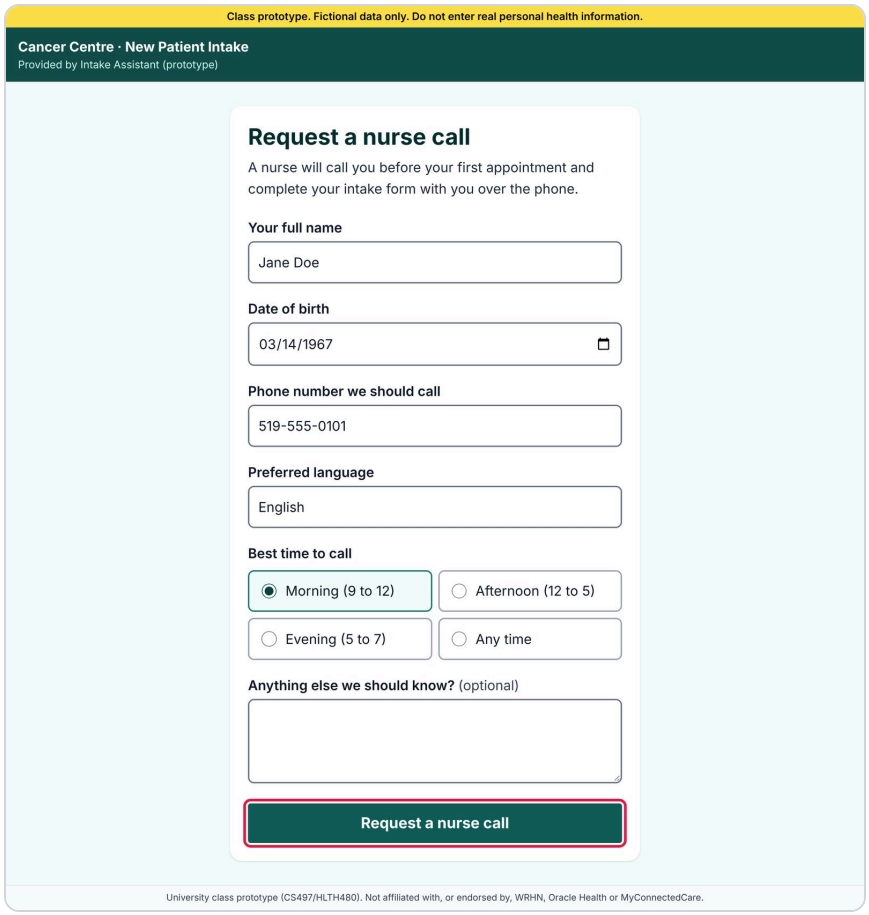

Not everyone is comfortable with computers. In this scenario Jane would rather do the intake over the phone, and Priya the nurse completes it for her. Takes about 10 minutes. (If you already did Scenario 1, reset the demo first.)

1. Open the patient email inbox, sign in as Jane (`jane.doe@example.com` / `password`) and open the intake email, like steps 1 and 2 of Scenario 1. In the green box near the top, click **Request a nurse call**.

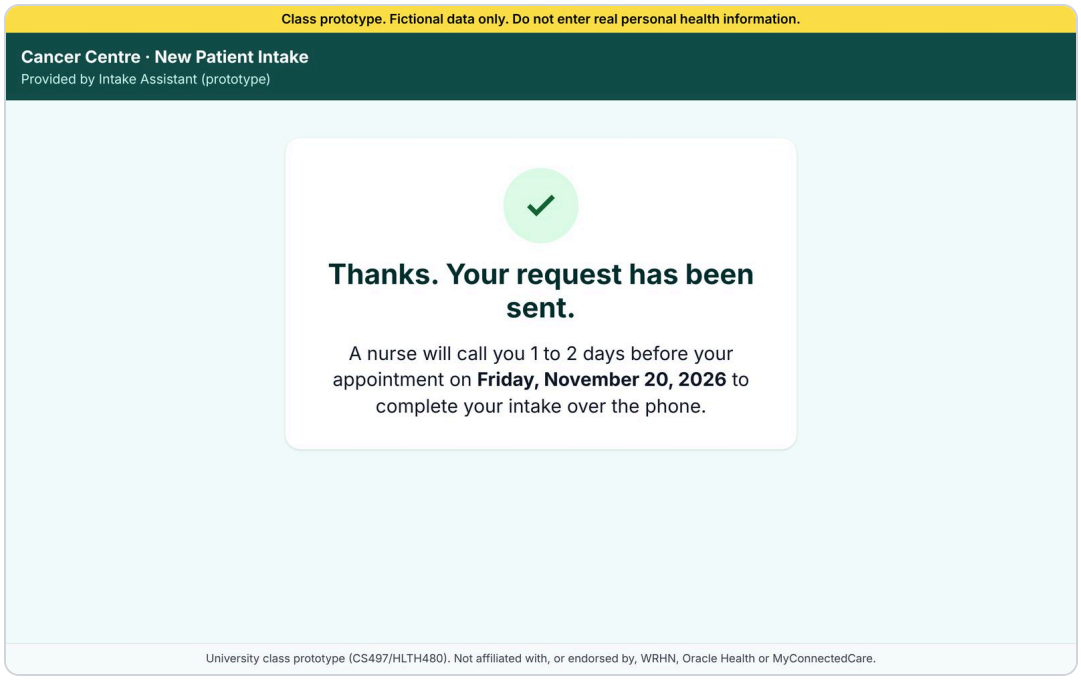

> Patients can also ask for a call from inside the form, using the yellow **Need help? Request a nurse call** button.

2 A short form opens. Your name, date of birth and phone number are already filled in. Add your **preferred language** and the **best time to call**, then click **Request a nurse call**.

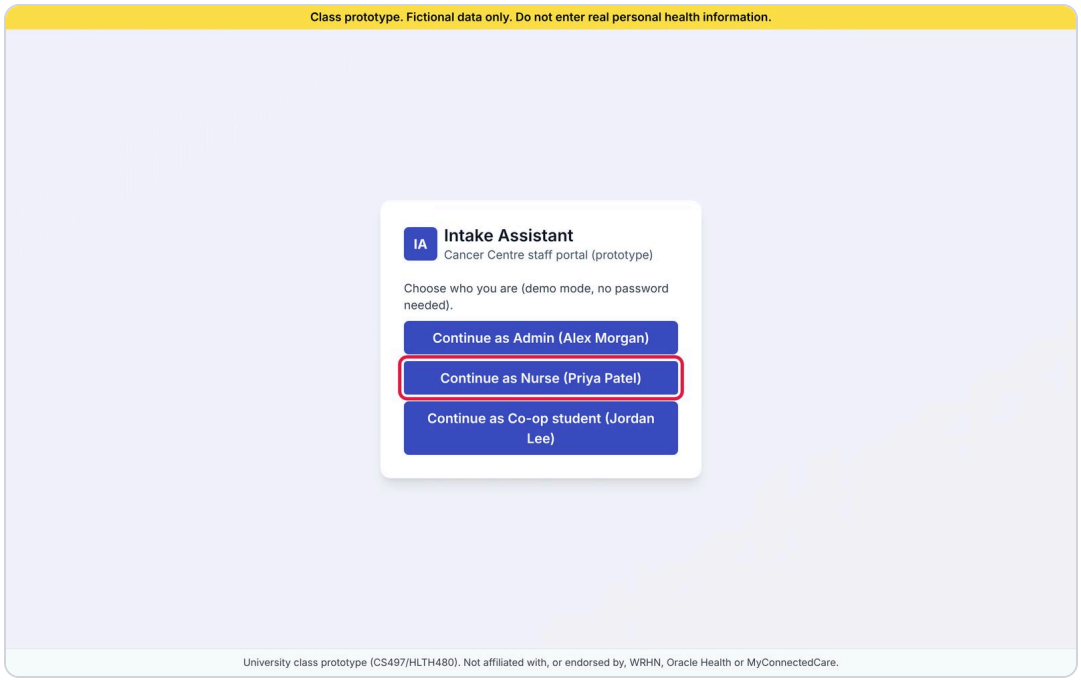

3 A message confirms that a nurse will call 1 to 2 days before the appointment. The patient is done.

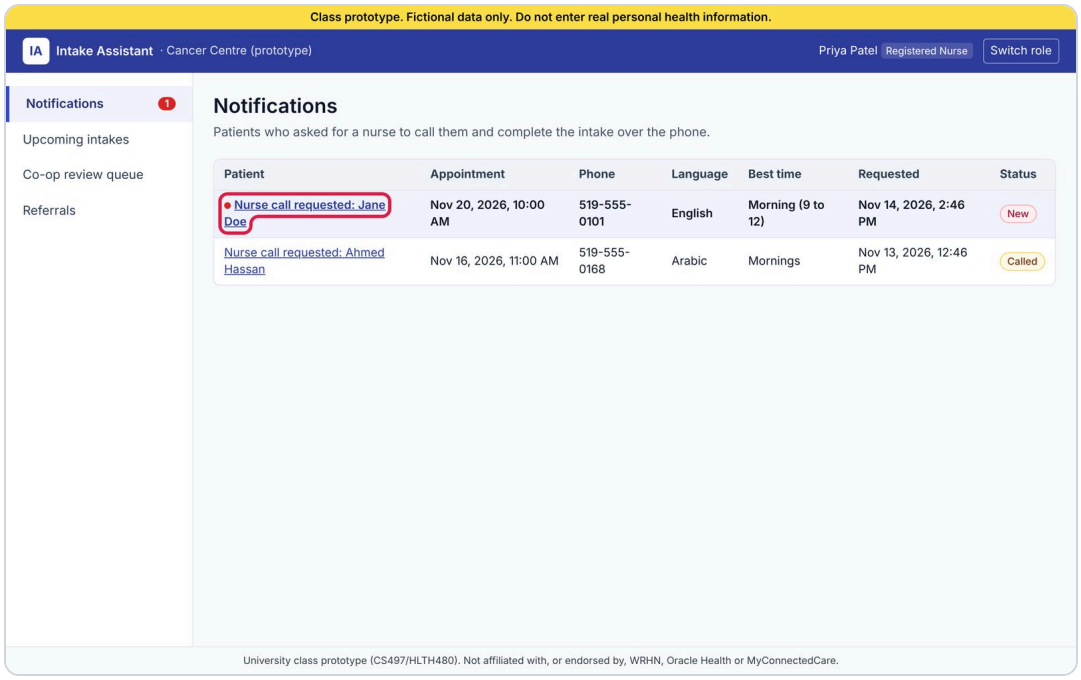

Part B: the nurse

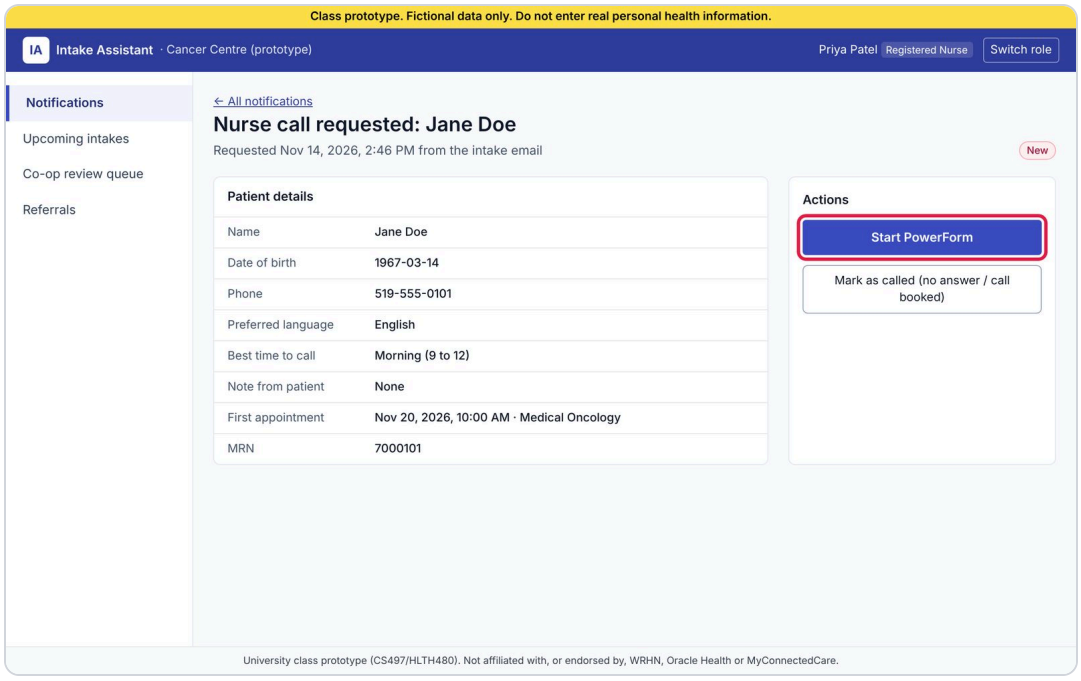

4 From the demo hub, open **Intake Assistant** and click **Continue as Nurse (Priya Patel)**.

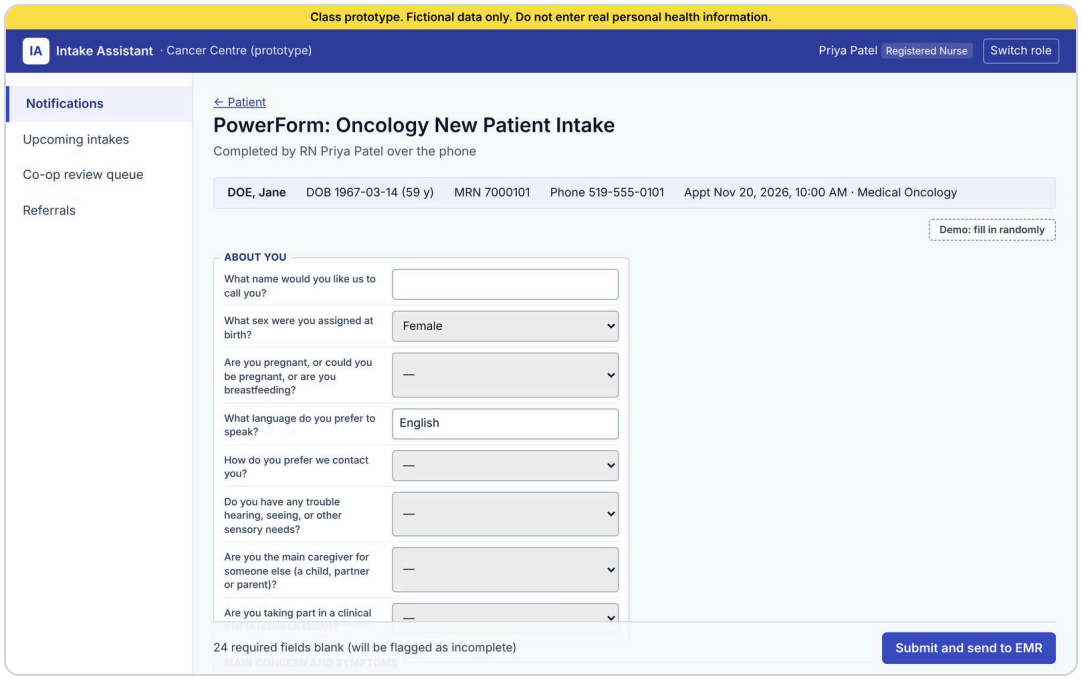

5 You land on **Notifications**. The red badge shows a new request. Click **Nurse call requested: Jane Doe**.

6 You see Jane's phone number, language and best time to call. Imagine you are now on the phone with her. Click **Start PowerForm**. (If she didn't answer, you would click "Mark as called" instead.)

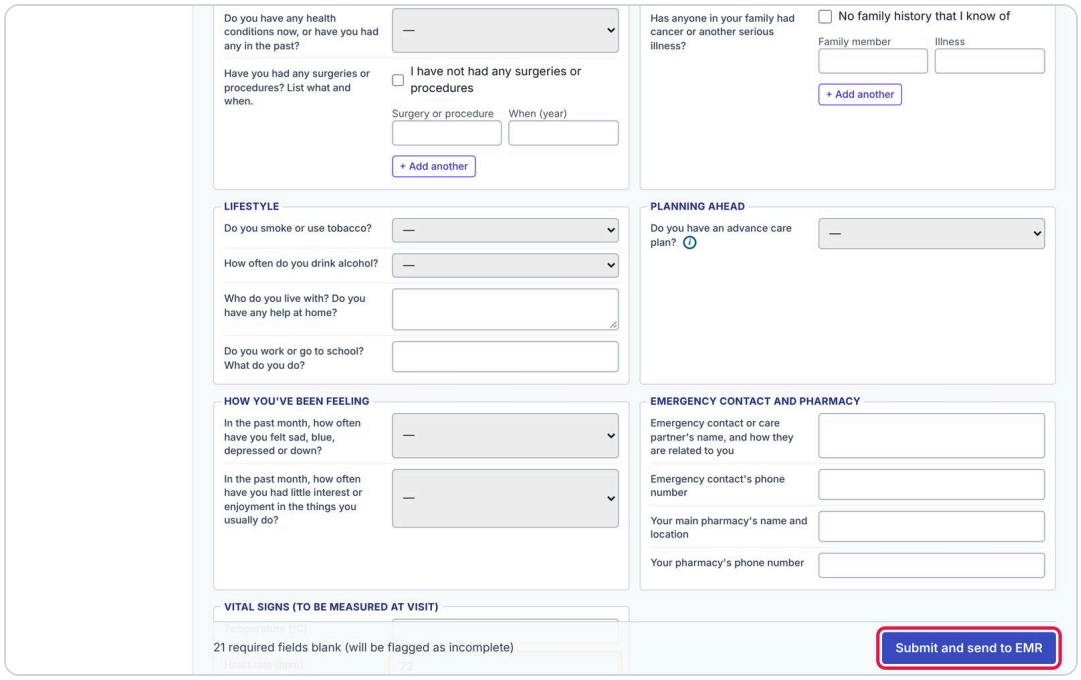

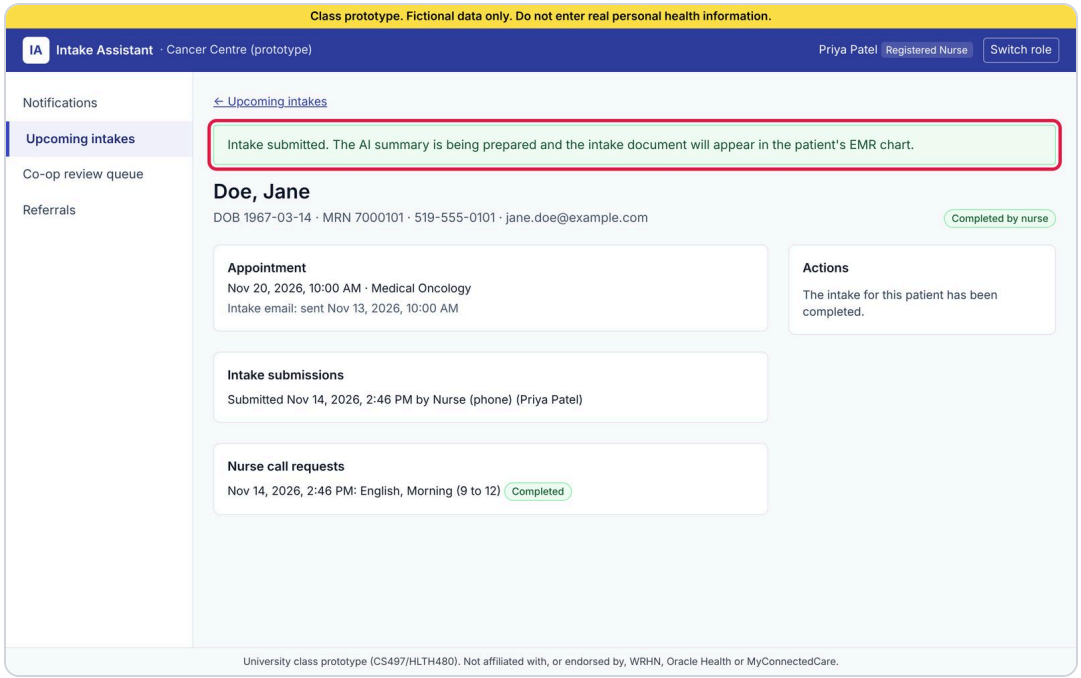

7 The **PowerForm** is a compact version of the same intake questions, built for staff who fill it in quickly while talking to the patient. It also has a section for vital signs. Fill in the answers (make up reasonable ones). The counter at the bottom shows how many required fields are still blank.

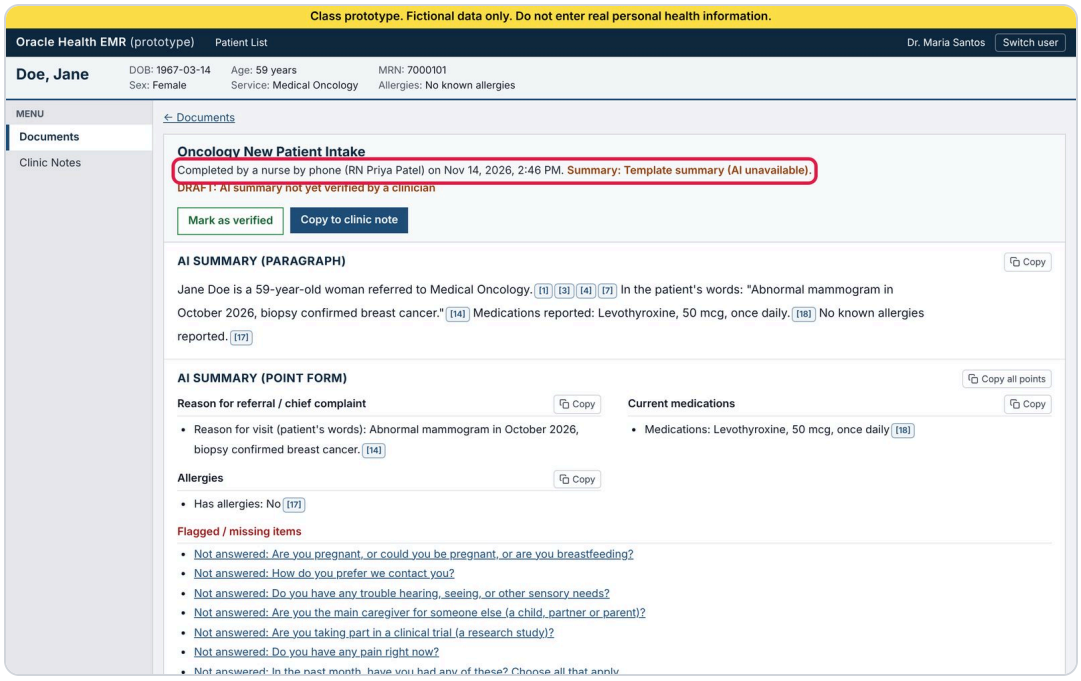

"Demo: fill in randomly" (top right) fills the form with made-up answers if you want to go fast.

8 When done, click **Submit and send to EMR**. A green message confirms the intake was submitted and the AI summary is being prepared.

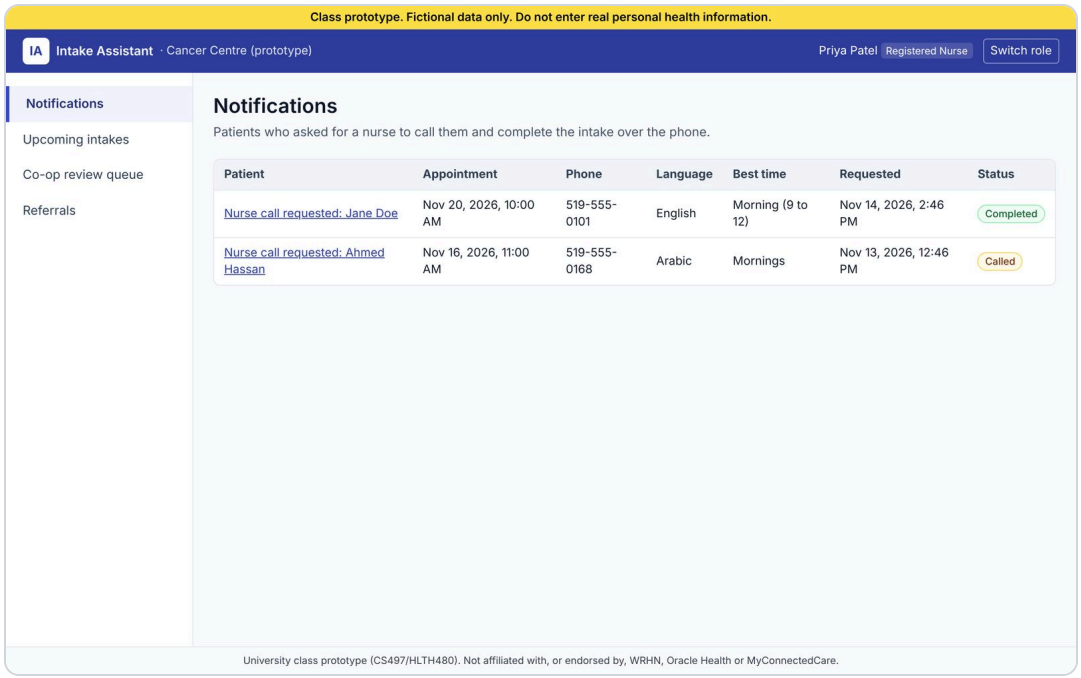

9 (Optional) Open the EMR, click **Doe, Jane** and open her intake. The top now says **"Completed by a nurse by phone (RN Priya Patel)"**, with the same AI summary and citations as in Scenario 2.

10 Back in Intake Assistant, the Notifications list shows Jane's request as **Completed**.

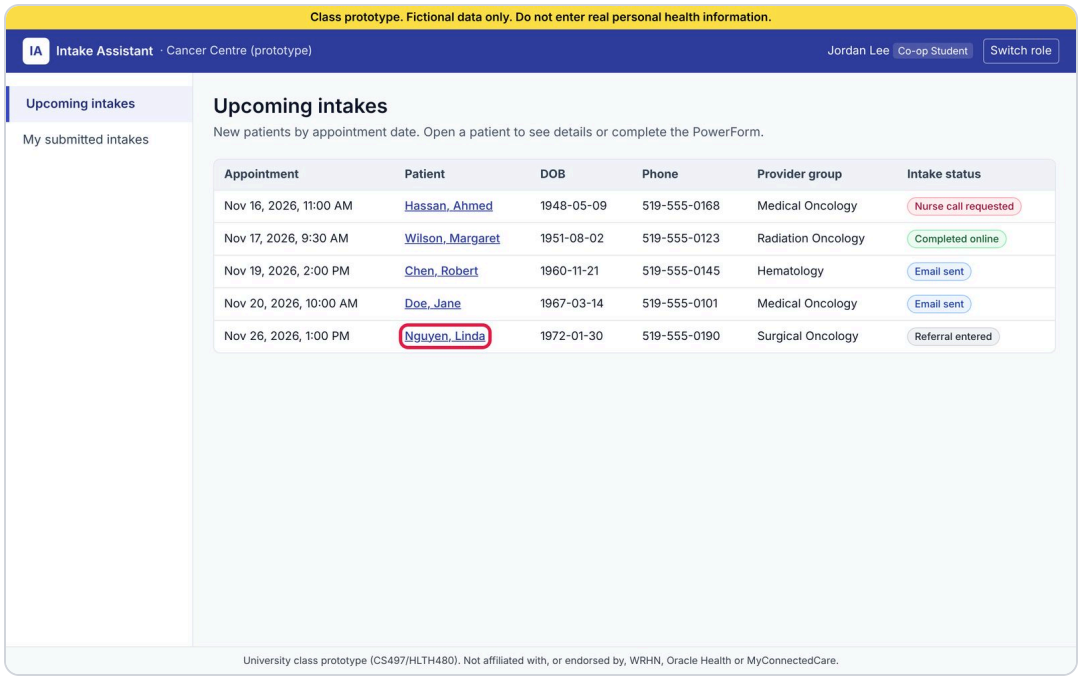

Part A: the co-op student

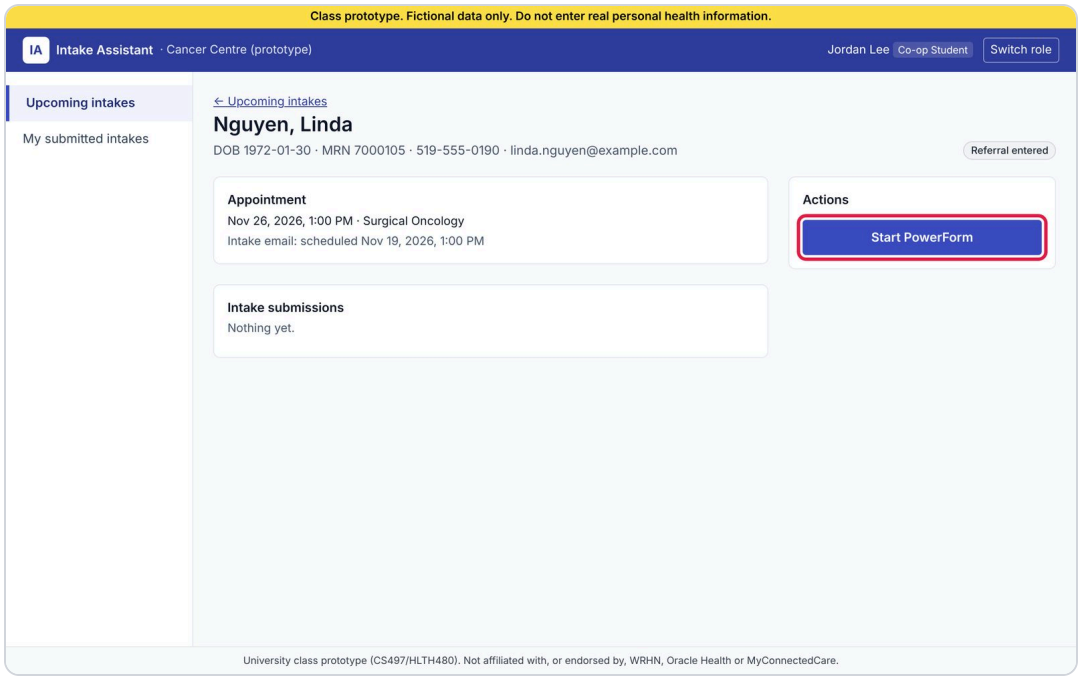

Scenario 4: A co-op student does the intake, a nurse checks it

Co-op students help by phoning patients and filling in the intake. Because they are still learning, a nurse checks their work before it goes to the doctor. You are **Jordan Lee**, then **Priya the nurse**. Takes about 10 minutes.

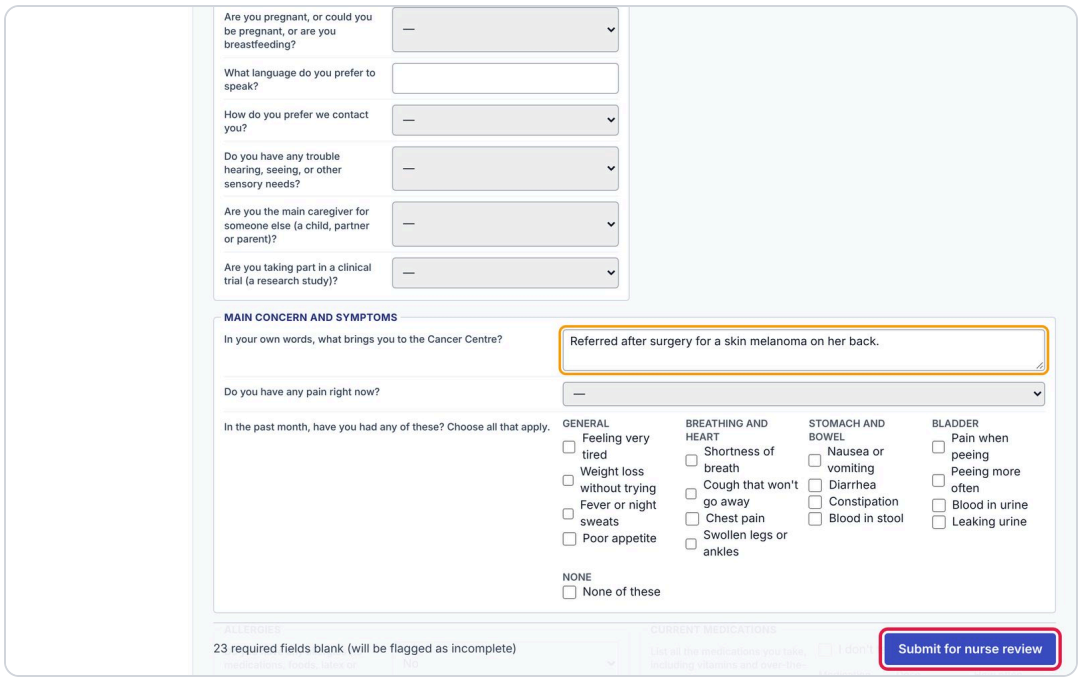

1 Open **Intake Assistant** and click **Continue as Co-op student (Jordan Lee)**. The **Upcoming intakes** list opens. Click **Nguyen, Linda**.

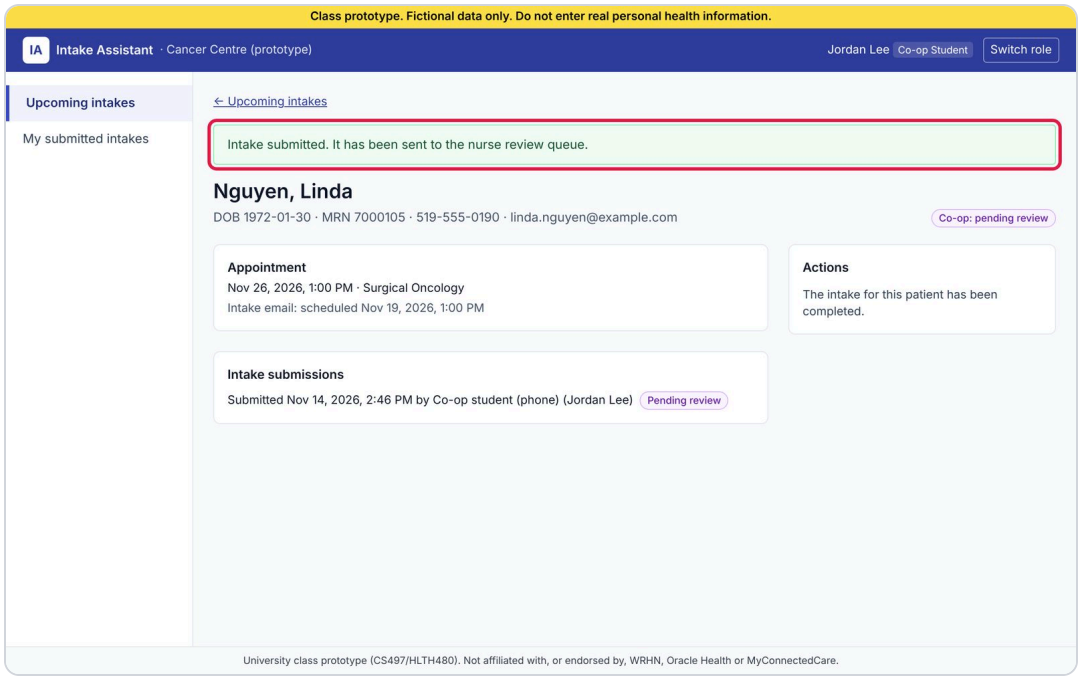

2 Click **Start PowerForm**.

3 Pretend you are on the phone with Linda and fill in the form. When finished, click **Submit for nurse review**. Notice that co-op students cannot send directly to the EMR.

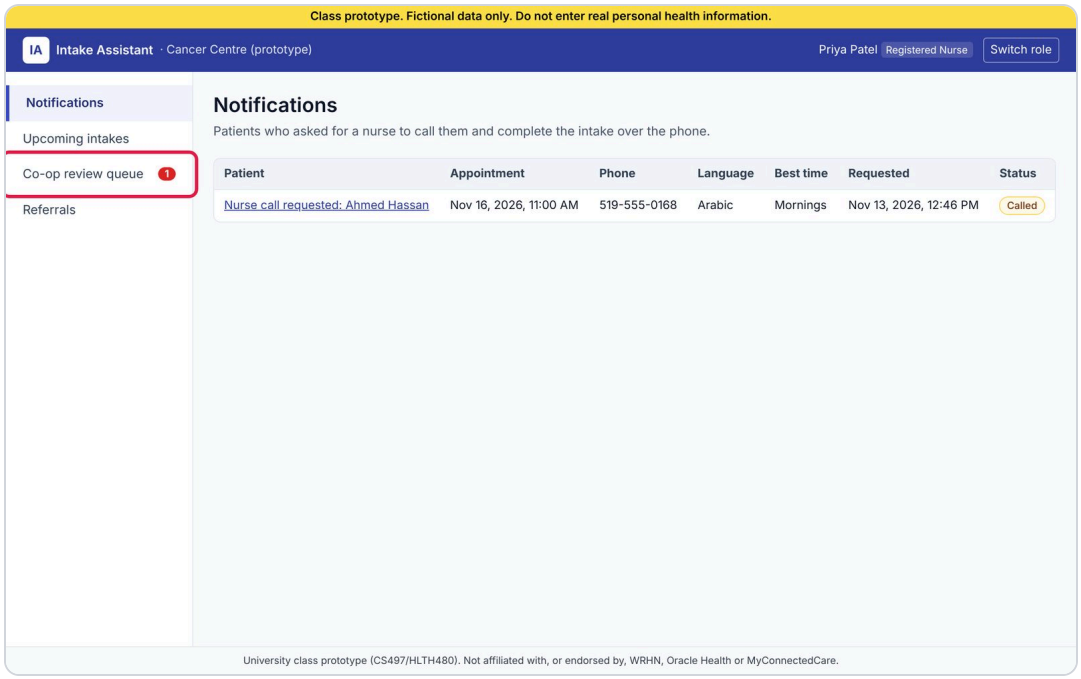

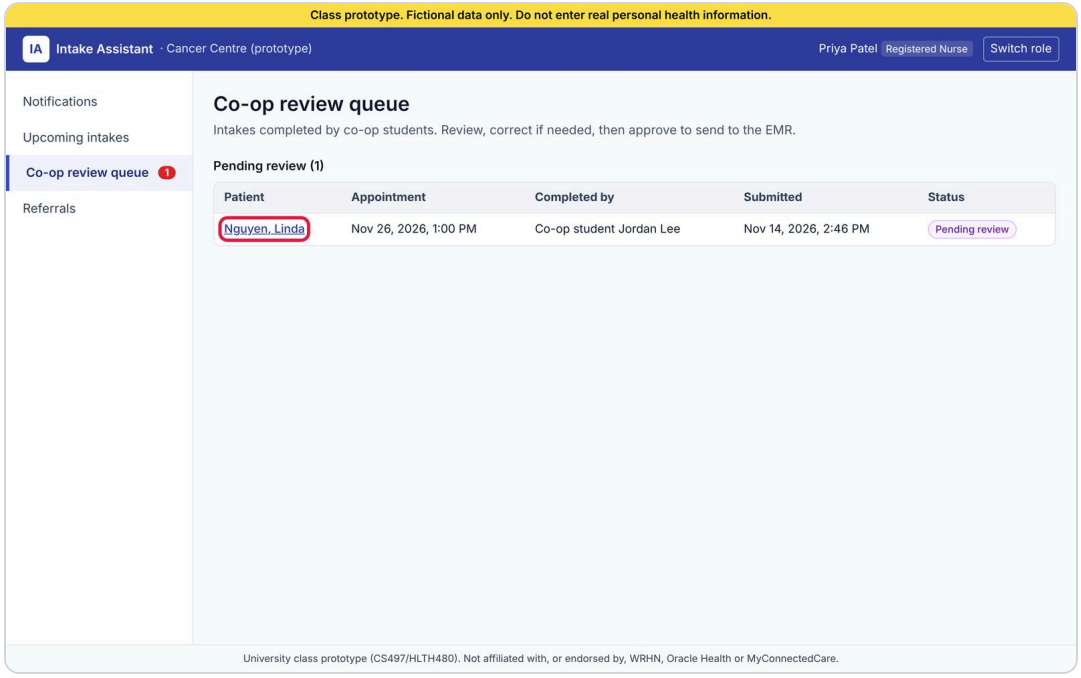

Confirmation that the intake went to the nurse review queue.

Part B: the nurse

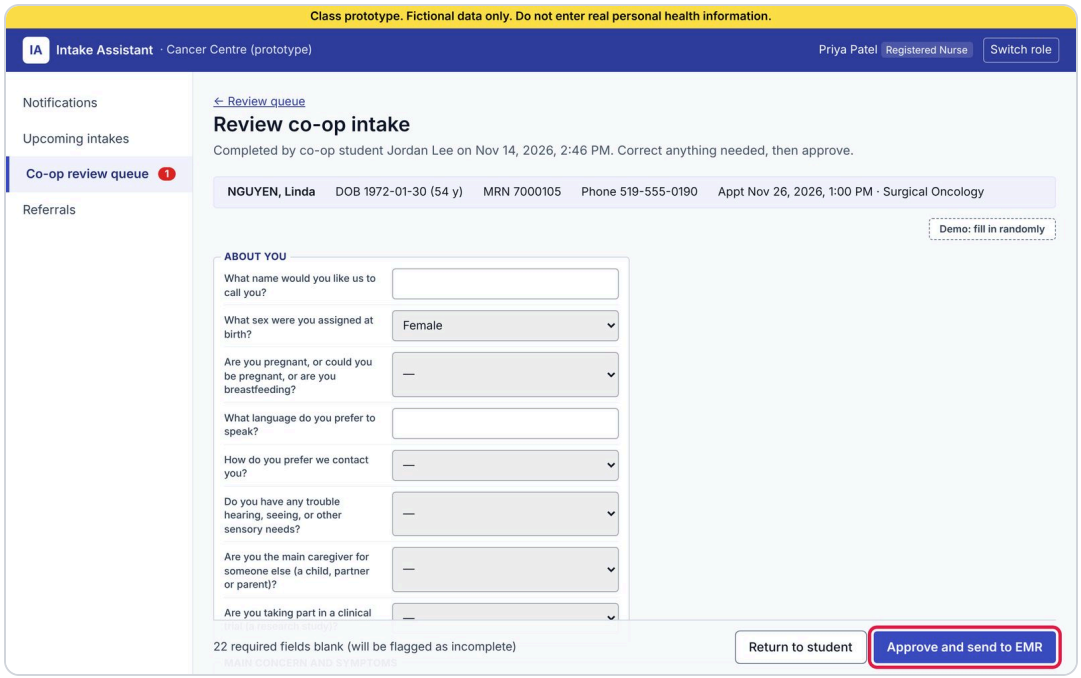

4 Click **Switch role** (top right), then **Continue as Nurse (Priya Patel)**. Click **Co-op review queue** on the left (the badge shows 1).

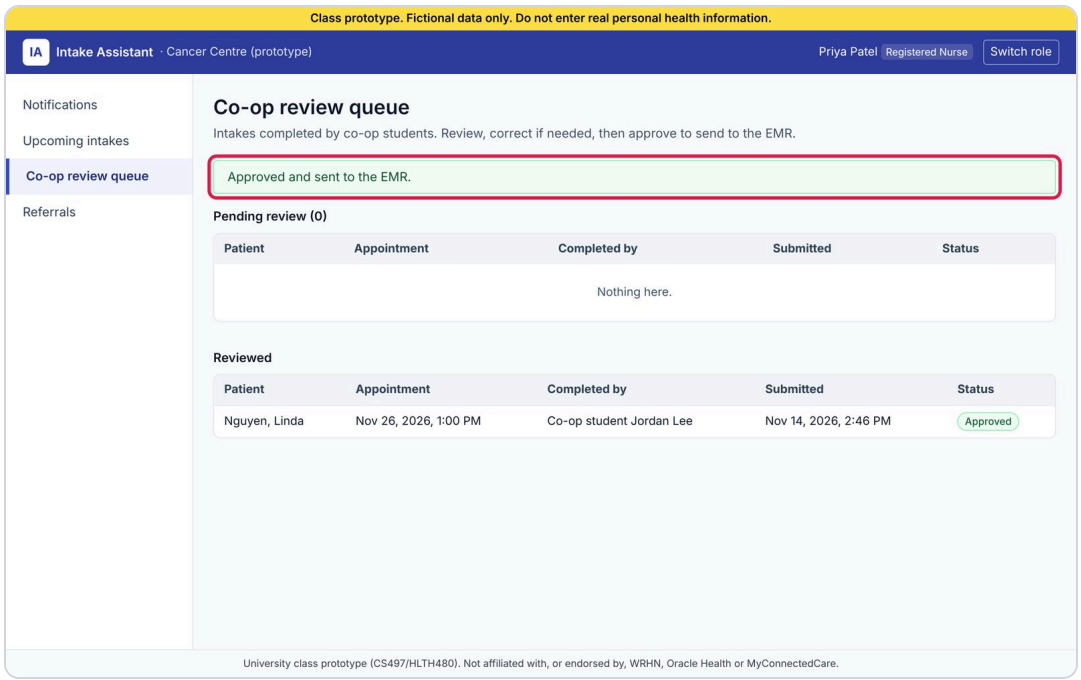

5 Click **Nguyen, Linda** to open the intake the student submitted.

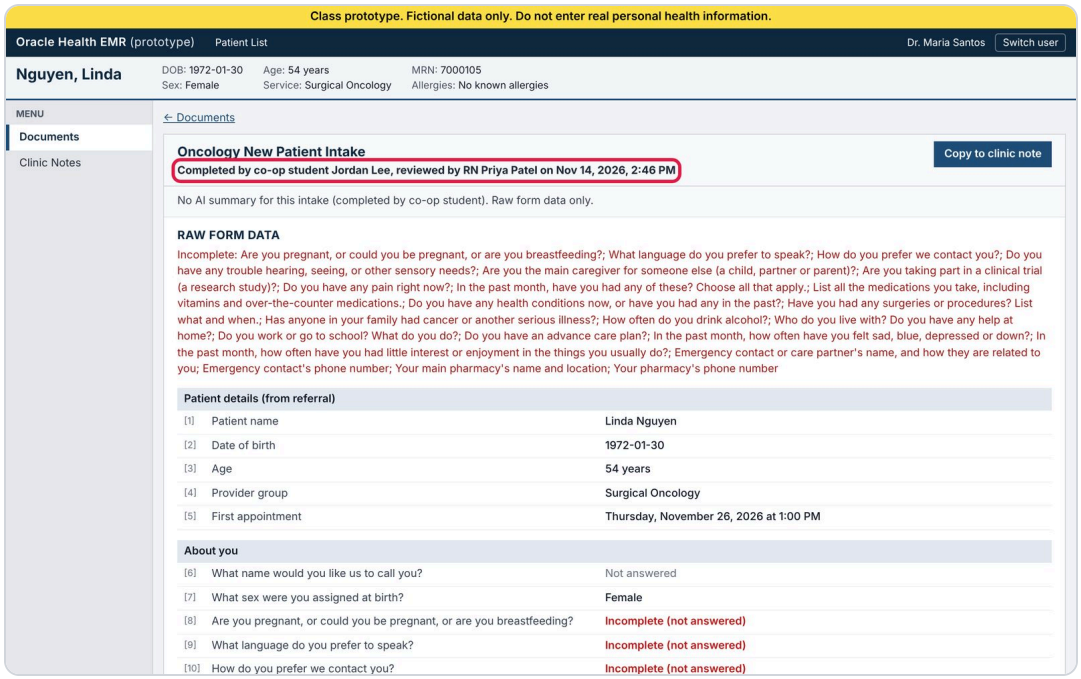

6 Check the answers and correct anything that looks wrong. When it looks right, click **Approve and send to EMR**. If it needs more work, click **Return to student** instead.

7 (Optional) In the EMR, open **Nguyen, Linda** → **Oncology New Patient Intake**. It says who completed it and who reviewed it. For co-op intakes there is **no AI summary**, only the raw form data, with unanswered questions listed in red at the top.

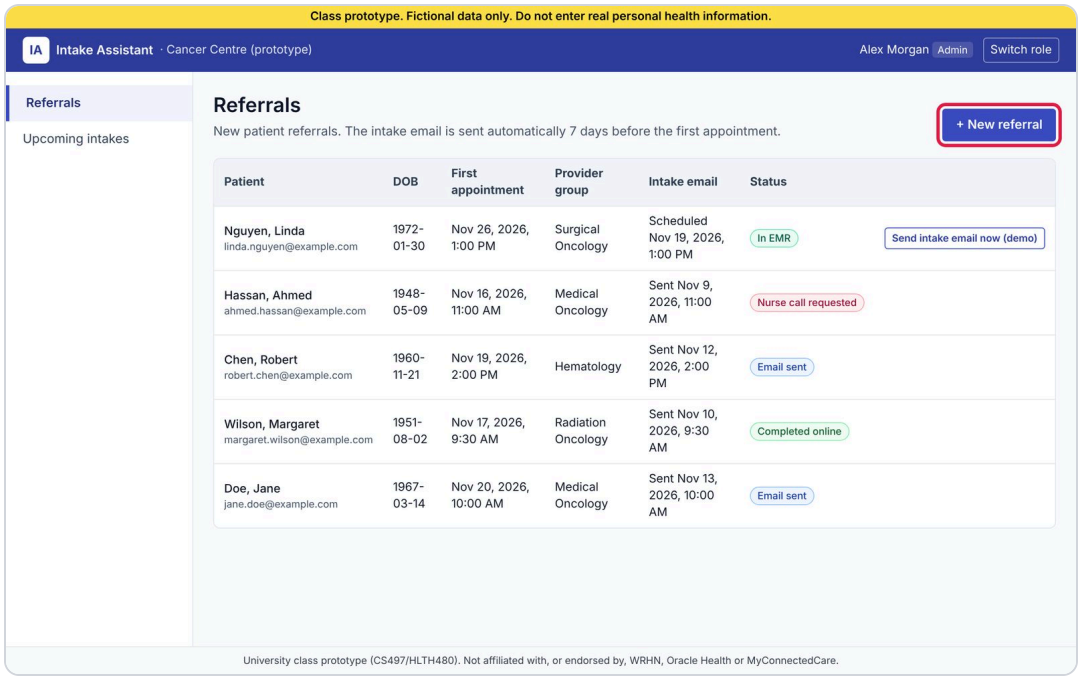

You are: the admin

Scenario 5: Front desk staff add a new patient

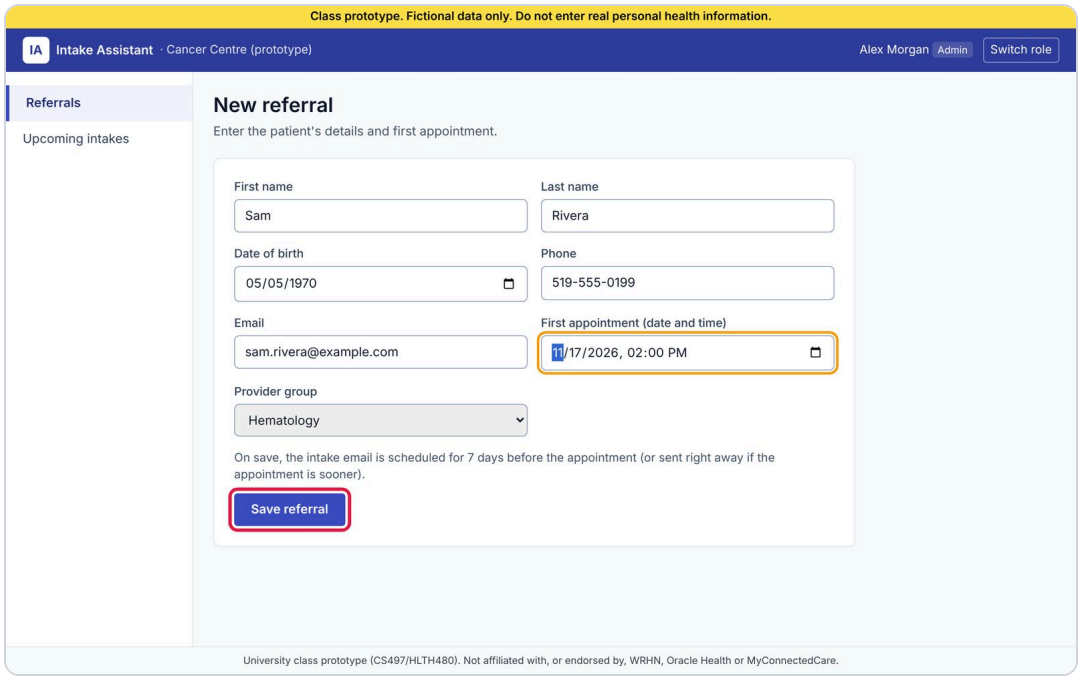

Everything starts with a referral. Here you are **Alex Morgan**, the admin, entering a brand new patient. This is also the easiest way to give each tester their own fresh patient. Takes about 3 minutes.

1. Open **Intake Assistant** and click **Continue as Admin (Alex Morgan)**. The **Referrals** page lists every referred patient and whether their intake email has been sent. Click **+ New referral**.

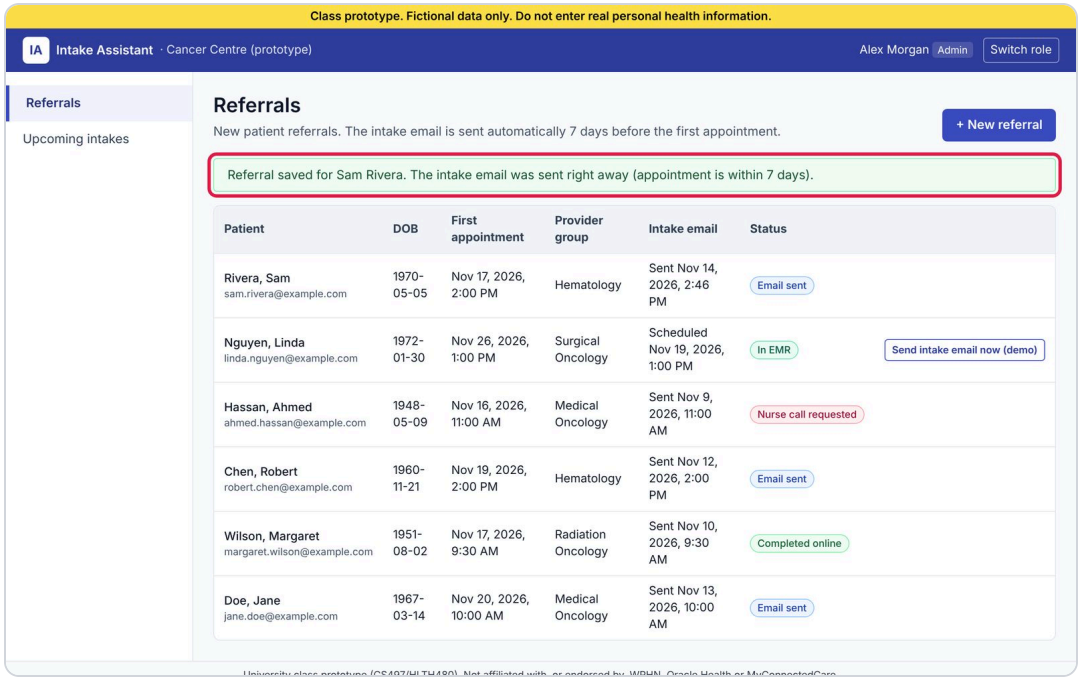

"Send intake email now (demo)" lets you send an email early instead of waiting.

2. Fill in the patient's name, date of birth, phone, a new email address (for example `sam.rivera@example.com`), the first appointment date and time, and the provider group. Click **Save referral**.

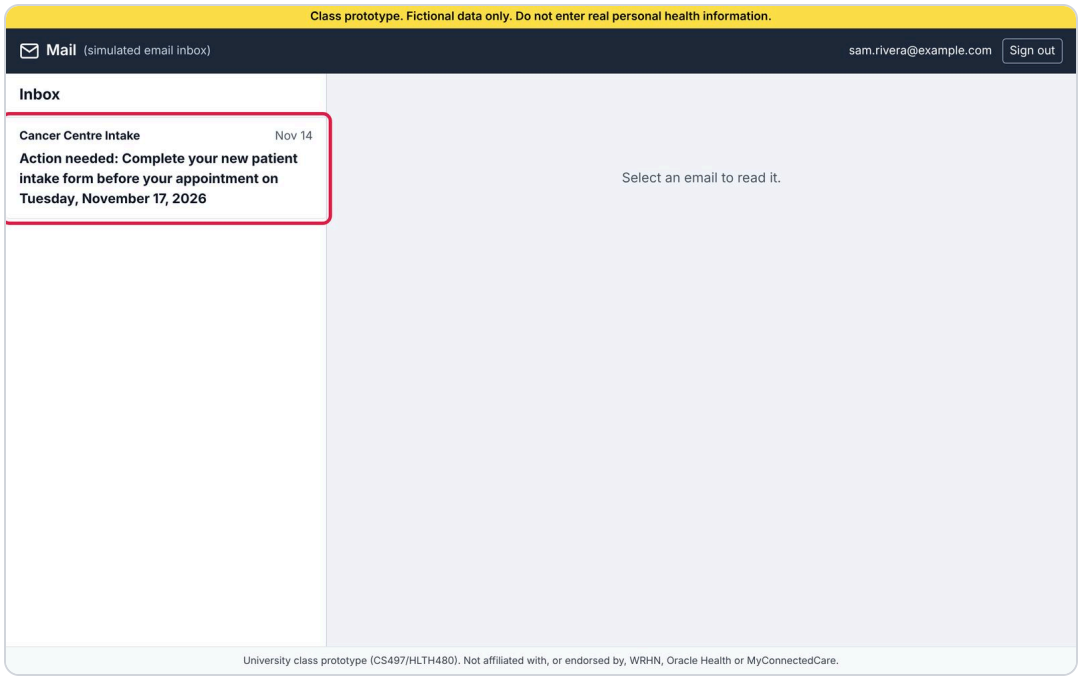

> The intake email is normally sent 7 days before the appointment. Pick an appointment **within the next 7 days** so the email is sent right away.

3. A green message confirms the referral was saved and the intake email was sent.

4 Open the patient email inbox (click **Sign out** first if Jane is still signed in) and sign in with the new email and the password `password`. The new patient's intake email is waiting. From here, follow Scenario 1 from step 2 with this new patient.

Tips and troubleshooting

If this happens...	Try this
The site takes a long time to load	It is waking up from sleep. Wait up to a minute and it will appear.
My earlier work disappeared	The site resets all demo data when it wakes up after 15 quiet minutes, or when someone clicks Reset demo data. Start the scenario again.
Jane's form is already sent, so I can't start a new one	Reset the demo (demo hub → gear → Reset demo data), or create a new patient with Scenario 5.
A list or badge doesn't show a change	Reload the browser tab. After a reset, reload every open tab.
The microphone or read-aloud doesn't work	Allow microphone access when your browser asks. Speech features work best in Chrome or Edge.
I want to be a different staff member	Click **Switch role** in the top right of Intake Assistant.
Someone else is testing at the same time	Everyone shares the same demo data. Give each person their own patient using Scenario 5, and avoid resetting while others are testing.

Glossary

Intake	The background information a clinic collects before a new patient's first visit.
Referral	A request from a family doctor or specialist for the patient to be seen at the Cancer Centre.
Oncologist	A doctor who specializes in treating cancer.
EMR	Electronic Medical Record: the computer system where a patient's health record is kept.
MyConnectedCare	The patient portal (website) where patients see appointments and fill in forms. A prototype version is used here.
Intake Assistant	The staff portal used by admins, nurses and co-op students.
PowerForm	The compact staff version of the intake form, filled in during a phone call.
Citation	A small numbered link in the AI summary, like [14], that points to the exact answer the sentence came from.
Verified	The doctor has checked the AI summary against the answers and confirmed it is accurate.
MRN	Medical Record Number, the patient's ID in the hospital system.

> Reminder: this is a university class prototype with fictional data. Do not enter real personal health information.
